From Databases To Hypermedia With 26 Cai Lebons:

From Databases to Hypermedia Hermann Maurer, Nick Scherbakov, Zahran Halim, Zaidah Razak, 2012-12-06 The number of books on databases is very large. Thus our decision to yet add another book to the body of literature requires some justification. However, even a cursory glance through this book will show that we have taken a rather different approach indeed when compared to monographs on databases. First, material ties together the well known relational model with the newer and not yet as solidly established object oriented one and leads to data models for hypermedia system. This is unique and timely: the chaos on the World Wide Web is getting out of hand and one of the main reasons is that the underlying data model is too weak. Second, the book is full of illustrations. And those illustrations are not only available in printed form but also on a CD ROM. Actually, much more is true for each of the 26 chapters: electronic courseware is available, one lesson per chapter. Third, the lessons described contain explanations that are easier or better to understand than those provided in the printed chapter, since a number of dynamic and interactive features are used. Fourth, the lessons can be used in a variety of modes as complement for the book as stand alone material instead of the book as slides for the lecturer and as help for the student. And as explained below, they can be easily modified.

Hypermedia/Hypertext and Object-oriented Databases

Heather Brown, 1991 Hypermedia Systems and Applications Jennifer A. Lennon, 2012-12-06 It is a pleasure and an honor to write a foreword for Jennifer Lennon's book *Hypermedia Systems and Applications*. World Wide Web and Beyond. I am fortunate to have been able to follow the development of this book from an excellent Ph D thesis to what I would consider one of the best and most comprehensive books in the area. It has a good chance to become a must for teachers, researchers and practitioners. For the sake of this foreword, let us combine the phenomena hypermedia, the Internet and the WWW by just calling them the Web. Well, this Web surely has become one of the super hot topics from both a scholarly and a commercial point of view. We have a saying that the Web is like a dog: one year's development of the Web corresponds to seven human years. You will be familiar with Murphy's law: Anything that can go wrong will go wrong and with a plethora of derivatives or specializations thereof like: If you are in an otherwise empty locker room, the only other person there is bound to have a locker just on top of yours or: If traffic is moving slowly, you are always going to be in the slowest moving lane and so on. Well, I have coined a version that applies to the Web: Whenever you have understood an important new development concerning the Web, you can be sure that it is obsolete.
