From Biped To Strider The Emergence Of Modern Human Walking Running And Resource Transport:

From Biped to Strider Jeff Meldrum, Charles E. Hilton, 2004-03-31 The inspiration for this volume of contributed papers stemmed from conversations between the editors in front of Chuck Hilton's poster on the determinants of hominid walking speed presented at the 1998 meetings of the American Association of Physical Anthropologists (AAPA). Earlier at those meetings Jeff Meldrum with Roshna Wunderlich had presented an alternate interpretation of the Laetoli footprints based on evidence of midfoot flexibility. As the discussion ensued we found convergence on a number of ideas about the nature of the evolution of modern human walking. From the continuation of that dialogue grew the proposal for a symposium which we called From Biped to Strider the Emergence of Modern Human Walking. The symposium was held as a session of the 69th annual meeting of the AAPA held in San Antonio, Texas, in 2000. It seemed to us that the study of human bipedalism had become overshadowed by the often polarized debates over whether australo pitheciines were wholly terrestrial in habit or retained a significant degree of arboreality.

Reconstructing Mobility Kristian J. Carlson, Damiano Marchi, 2014-08-05 Assembles a collection of experts to provide a current account of different approaches e.g. traditional comparative and experimental being applied to study mobility. Moreover the book aims to stimulate new theoretical perspectives that adopt a holistic view of the interaction among intrinsic i.e. skeletal and extrinsic i.e. environmental factors that influence differential expression of mobility. Since the environment undoubtedly impacts mobility of a wide variety of animals insights into human mobility as a concept can be improved by extending approaches to investigating comparable environmental influences on mobility in animals in general. The book teases apart environmental effects that transcend typical categories e.g. coastal versus inland mountainous versus level arboreal versus terrestrial. Such an approach when coupled with a new emphasis on mobility as types of activities rather than activity levels offers a fresh insightful perspective on mobility and how it might affect the musculoskeletal system.

Churchill, 2014-10-02 Thin on the Ground Neandertal Biology Archeology and Ecology synthesizes the current knowledge about our sister species the Neandertals combining data from a variety of disciplines to reach a cohesive theory behind Neandertal low population densities and relatively low rate of technological innovation The book highlights and contrasts the differences between Neandertals and early modern humans and explores the morphological physiological and behavioral adaptive solutions which led to the extinction of the Neandertals and the population expansion of modern humans Written by a world recognized expert in physical anthropology Thin on the Ground Neandertal Biology Archaeology and Ecology will be a must have title for anyone interested in the rise and fall of the Neandertals *Homo* Abhijit Naskar, HOMO A Brief History of Consciousness is Abhijit Naskar's yet another scientific work of adventure In this book he turns the clock back millions of years for the readers to witness the evolution of the most mysterious living mechanism on planet earth The Human Consciousness Here he takes a broader approach of scientific investigation and dives deep into the abyss of history to reveal the exhilarating scientific truths behind apparently ancient questions like How and when did humans start to become truly humans What exactly triggered the mysterious development of Human Consciousness How did the humans turn out to be the smartest species on this planet This is a page turning adventure story that stunningly enables even the most non technical reader to think like a brain scientist

Energy and Civilization Vaclav Smil, 2018-11-13 A comprehensive account of how energy has shaped society throughout history from pre agricultural foraging societies through today's fossil fuel driven civilization I wait for new Smil books the way some people wait for the next Star Wars movie In his latest book Energy and Civilization A History he goes deep and broad to explain how innovations in humans ability to turn energy into heat light and motion have been a driving force behind our cultural and economic progress over the past 10 000 years Bill Gates Gates Notes Best Books of the Year Energy is the only universal currency it is necessary for getting anything done The conversion of energy on Earth ranges from terra forming forces of plate tectonics to cumulative erosive effects of raindrops Life on Earth depends on the photosynthetic conversion of solar energy into plant biomass Humans have come to rely on many more energy flows ranging from fossil fuels to photovoltaic generation of electricity for their civilized existence In this monumental history Vaclav Smil provides a comprehensive account of how energy has shaped society from pre agricultural foraging societies through today's fossil fuel driven civilization Humans are the only species that can systematically harness energies outside their bodies using the power of their intellect and an enormous variety of artifacts from the simplest tools to internal combustion engines and nuclear reactors The epochal transition to fossil fuels affected everything agriculture industry transportation weapons

communication economics urbanization quality of life politics and the environment Smil describes humanity's energy eras in panoramic and interdisciplinary fashion offering readers a magisterial overview This book is an extensively updated and expanded version of Smil's *Energy in World History* 1994 Smil has incorporated an enormous amount of new material reflecting the dramatic developments in energy studies over the last two decades and his own research over that time We Are All Black Abhijit Naskar, If origin defines race then we are all Africans we are all black No matter how fascinatingly white one's skin is or how classy one's accent of English is the fact remains the whole of humanity comes from the land of Africa It is the cradle of our species In this scientific literature the celebrated Scientist Abhijit Naskar makes a humanitarian attempt with his sharp insight of the molecular realm of the mind to unite all of humanity with the thread of biological oneness This is a treatise of biological sciences that makes humanism triumph over the primordial evil of racial discrimination In *We Are All Black* Naskar makes us delve deep into the neural domain of the human mind to recognize the innate biological seeds of Racism and empowers us to make more effective and conscientious efforts to terminate this primitive evil from the human society We emerge from this spell binding odyssey of science and philosophy with one sole conviction that we are all humans coming from Africa Autobiography of God Abhijit Naskar, Many of us experience the divine presence of God in our lives but what would happen if by some magical means we get to peek inside the mystical domain of this apparently supernatural consciousness What if God personally tells us how does he/she impact over our lives and our very existence What if this inexplicable divine entity tells us why and how does he/she feel so real to many of us Why do some people cause destruction in his/her name Why are we humans so fascinated with beliefs Why does the battle between believers and atheists never end Let's get inside God's head and visualize the world and ourselves from his/her perspective In this page turning scientific odyssey we get to explore every single biological corner of God's consciousness

Focality and Extension in Kinship Warren Shapiro, 2018-04-20 When we think of kinship we usually think of ties between people based upon blood or marriage But we also have other ways nowadays called performative of establishing kinship or hinting at kinship many Christians have in addition to parents godparents members of a trade union may refer to each other as brother or sister Similar performative ties are even more common among the so called tribal peoples that anthropologists have studied and especially in recent years they have received considerable attention from scholars in this field However these scholars tend to argue that performative kinship in the Tribal World is semantically on a par with kinship established through procreation and marriage Harold Scheffler long time Professor of Anthropology at Yale University has argued by contrast that procreative ties are everywhere semantically central i.e. focal that they provide bases from which other kinship ties are extended Most of the essays in this volume illustrate the validity of Scheffler's position though two contest it and one exemplifies the soundness of a similarly universalistic stance in gender behaviour This book will be of interest to everyone concerned with current controversy in kinship and gender studies as well as those who would know what anthropologists

have to say about human nature The study of kinship once ruled the discipline of anthropology and Hal Scheffler was one of its magisterial figures This volume reminds us why Scheffler's powerful analyses of kinship systems often conflicted with the views of his more relativist contemporaries He cut through the fog of theory to emphasise the human essentials namely the importance of the social bonds rooted in motherhood and fatherhood Anthropology in its decades long retreat from the serious study of kinship has lost a great deal This volume points the way to a restoration Peter Wood National Association of Scholars

Shaping Humanity John Gurche, 2013-11-26 Describes the process by which the author uses knowledge of fossil discoveries and comparative ape and human anatomy to create forensically accurate representations of human beings and ancient ancestors

Functional Inference in Paleoanthropology David J. Daegling, 2022-01-04

In this deep examination of functional morphology a renowned paleoanthropologist offers a new way to investigate human evolution through the fossil record It is common for two functional anatomists to examine the exact same fossil material yet argue over its evolutionary significance How can this be Traditionally paleoanthropology has interpreted hominin fossil morphology by first considering the ecological challenges hominins faced then drawing adaptive inferences based on the idea that skeletal morphology is largely a reflection of paleoecology In Functional Inference in Paleoanthropology innovative paleoanthropologist David J Daegling suggests that researchers can resolve dichotomous interpretations of the fossil record by instead focusing on the biology and development of the bones themselves such as measurable responses to deformations stresses and damage Critically exploring how scientists probe and interpret fossil morphology for behavioral and adaptive inferences Daegling makes the case that an intelligible science of functional morphology in the fossil record is impossible without the inclusion of this mechanobiological perspective Drawing on historical examples from long standing debates on the emergence of bipedality and the dietary shifts that facilitated the emergence of the hominin clade Daegling traces the disjunctions between theoretical principles of comparative morphology and methodological practice in the paleontological context of human evolution Sharing rich findings from recent decades of research in skeletal biomechanics Functional Inference in Paleoanthropology examines how bone adapts over the lifespan what environmental factors influence its quality and how developmental constraints limit the skeleton s adaptive potential over evolutionary time
