Jenkins, 2013-09-03 Introduction to Cane Sugar Technology provides a concise introduction to sugar technology more specifically cane sugar technology up to the production of raw sugar Being intended originally for use in a post graduate university course the book assumes a knowledge of elementary chemical engineering as well as adequate knowledge of chemistry In the field of sugar manufacture itself the object of the book is to place more emphasis on aspects which are not adequately covered elsewhere In accordance with this objective attention has been concentrated mainly on processes and operation of the factory and description of equipment is made as brief as possible with numerous references to other books where more detail is available The emphasis on operation rather than equipment has also been prompted by observation of quite a few factories in different countries where good equipment is giving less than its proper performance due to inefficient operation and supervision The book is confined to the raw sugar process which has been the author's main interest Refining is discussed only to the extent required to explain refiners requirements concerning quality of raw sugar Cane Sugar and Its Manufacture Hendrik Coenraad Prinsen Geerligs, 1909

Sugar and the Process of Its Manufacture in Java (Classic Reprint) Prinsen Geerligs, 2017-12-04 Excerpt from On Cane Sugar and the Process of Its Manufacture in Java The sugar cane which is now cultivated in many varieties in every tropical and semi tropical country of the world on a larger or smaller scale came originally according to De Candolle from Cochin China or neighbouring lands from whence it was brought over to China the islands of the Indian Ocean India and afterwards to Arabia In their wars of conquest the Arabians introduced the cultivation of the sugar cane successively into Persia Egypt Palestine Syria along the whole North coast of Africa into Sicily and into Spain The Spaniards transported it after the expeditions of Columbus to their empire in the West Indies and America where the cultivation at once became a very flourishing one Cook found the sugar cane in a cultivated state in the Polynesian islands to which it had very probably been brought from Asia About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Prinsen-Geerligs, 2015-08-06 Excerpt from Cane Sugar and Its Manufacture The aim of the present work is to compile in one book everything that is known about the chemistry and the technology of the sugar cane and cane sugar manufacture In doing this the discussion of technicalities relating to machinery has been carefully avoided because this subject is already sufficiently dealt with in Noel Deerr's work Sugar and the Sugar Cane Only those points are mentioned here which are indispensable for the proper understanding of the chemical and technical questions investigated in this work Although the author has chiefly made use of his own investigations and researches carried on during his 17 years continuous stay in Java at the head of the West Java Sugar Experiment Station he has also gladly and gratefully referred to the results of work done by his colleagues in other parts of the world In every case where reference is made to the work of others this has been acknowledged in a footnote The enumeration of the chemical and physical characteristics of the three kinds of sugar is chiefly borrowed from Prof Dr E O von Lippmann's excellent handbook Die Chemie der Zuckerarten In agreement with that distinguished scientist the author has used in his book Fischer's nomenclature for the different kinds of sugar because the terms dextrose and levulose are fast becoming obsolete in scientific literature and are apt to cause confusion In the present work the different terms have the following signification Sugar The commercial product Sucrose The chemical body the principal constituent of the commercial product Glucose The chemical body also called dextrose Fructose The chemical body also called levulose Invert Sugar The mixture of exactly equal proportions of glucose and fructose Reducing Sugar Mixtures

of uneven proportions of glucose and fructose The author has pleasure in acknowledging his great indebtedness to two gentlemen Mr James P Ogilvie Associate Editor of the International Sugar Journal and Mr T H P Heriot especially the latter for a painstaking and laborious revision of the English text About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
