Thin Bone Vault, The: The Origin Of Human Intelligence Fredric M Menger, 2009-02-11 This book delves into one of the greatest riddles perplexing modern science Why are humans so smart In a format understandable even by the non expert the author investigates the origins of human intelligence starting with classical Darwinian concepts Thus the strengths and beauty of natural selection are presented with many examples taken from natural history Common criticisms of Darwin from scientists and non scientists alike are confronted and shown to be either inconclusive or outright false The author then launches into a discussion of human intelligence the most important feature of human evolution and how it cannot be fully explained by mutational selection Modern humans are smarter than what is demanded by our evolutionary experience as hunter gatherers The difficulty lies in the inability of natural selection to answer the following question how can a complex set of genes controlling expensive traits with little immediate benefit come into permanent existence within a short time period in every member of a small population which was dispersed and geographically isolated over a huge planet which had a low reproductive output and a low mutation rate The book concludes with a speculative epigenetic theory of intelligence that does not require DNA mutations as a source of evolution Although the book is comprehensible by anyone with a college education this last section in particular should intrigue both layman and expert alike a *Petroleum Times*, 1926 *Not So Different* Nathan H. that loss we gain a fuller appreciation of such phenomena as sibling rivalry and the biological basis of grief helping us lead more grounded moral lives among animals our closest kin Through a mix of colorful reporting and rigorous scientific research Lents describes the exciting strides scientists have made in decoding animal behavior and bringing the evolutionary paths of humans and animals closer together He marshals evidence from psychology evolutionary biology cognitive science anthropology and ethology to further advance this work and to drive home the truth that we are distinguished from animals only in degree not in kind

Archaeology, History and Science Marcos Martinon-Torres,Thilo Rehren,2016-09-16 Using a combination of historical archaeological and scientific data is not an uncommon research practice Rarely found however is a more overt critical consideration of how these sources of information relate to each other or explicit attempts at developing successful strategies for interdisciplinary work The authors in this volume provide such critical perspectives examining materials from a wide range of cultures and time periods to demonstrate the added value of combining in their research seemingly incompatible or even contradictory sources Case studies include explorations of the symbolism of flint knives in ancient Egypt the meaning of cuneiform glass texts medieval metallurgical traditions and urban archaeology at industrial sites This volume is noteworthy as it offers novel contributions to specific topics as well as fundamental reflections on the problems and potentials of the interdisciplinary study of the human past
