account of possession provides novel contributions to debates about what determines what we ought to do and the account of correctly responding to reasons provides novel contributions to debates about causal theories of reacting for reasons After defending views about possession and correctly responding Lord shows that the account of rationality can solve two difficult problems about rationality The first is the New Evil Demon problem The book argues that the account has the resources to show that internal duplicates necessarily have the same rational status The second problem concerns the deontic significance of rationality Recently it has been doubted whether we ought to be rational The ultimate conclusion of the book is that the requirements of rationality are the requirements that we ultimately ought to comply with If this is right then rationality is of fundamental importance to our deliberative lives *Morality and Revelation in Islamic Thought and Beyond* Amir

Saemi,2024 The book is about the moral problem generated by morally controversial passages in scripture and in the Qur'an in particular passages that seem to allow violence and discrimination against women and sexual and religious minorities The conservatives argue that scripture can override our own moral judgments and thus certain acts of violence or discrimination can be morally justified through scripture The book explores this conservative argument and finds ways to undermine it The book aims to show how a progressive Muslim or a theist in general can reject violence and discrimination without renouncing scripture as God's word Moreover the book provides a refreshing overview of the history of ethics in the Islamic tradition

This book articulates an original scheme for the conceptualization of action Beginning with a new approach to the individuation of acts it delineates the relationships between basic and non basic acts and uses these relationships in the definition of ability and intentional action The author exhibits the central role of wants and beliefs in the causation of acts and in the analysis of the concept of action Professor Goldman suggests answers to fundamental questions about acts and develops a set of ideas and principles that can be used in the philosophy of mind the philosophy of language ethics and other fields including the behavioral sciences Originally published in 1977 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable

paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Springs of Action Alfred R. Mele, 1992 Tackling some central problems in the philosophy of action Mele constructs an explanatory model for intentional behavior locating the place and significance of such mental phenomena as beliefs desires reasons and intentions in the etiology of intentional action In the first part Mele illuminates the connection between desire and action and defends detailed characterizations of irresistible desires and reasons for action Mele argues for the viability of a causal approach to the explanation of intentional action in terms of psychological states and events paying special attention to recent worries about the causal relevance of the mental In Part Two Mele goes on to develop a subtle and well defended view that the motivational role of intentions is of a different sort from that of beliefs and desires Mele's account based largely on a careful study of the functions of intentions presents intentions as states irreducible to collections of beliefs and desires which hinge on their executive and representational features *Springs of Action* will be of interest not only to philosophers of action but also to those interested in the philosophy of mind metaphysics and ethics

Making Objects and Events Simon J. Evnine, 2016-07-07 Simon J Evnine explores the view which he calls amorphic hylomorphism that some objects have matter from which they are distinct but that this distinctness is not due to the existence of anything like a form He draws on Aristotle's insight that such objects must be understood in terms of an account that links what they are essentially with how they come to exist and what their functions are the coincidence of formal final and efficient causes Artifacts are the most prominent kind of objects where these three features coincide and Evnine develops a detailed account of the existence and identity conditions of artifacts and the origins of their functions in terms of how they come into existence This process is in general terms that they are made out of their initial matter by an agent acting with the intention to make an object of the given kind Evnine extends the account to organisms where evolution accomplishes what is effected by intentional making in the case of artifacts and to actions which are seen as artifactual events

Probability and Causality J.H. Fetzer, 2012-12-06 The contributions to this special collection concern issues and problems discussed in or related to the work of Wesley C Salmon Salmon has long been noted for his important work in the philosophy of science which has included research on the interpretation of probability the nature of explanation the character of reasoning the justification of induction the structure of space time and the paradoxes of Zeno to mention only some of the most prominent During a time of increasing preoccupation with historical and sociological approaches to understanding science which characterize scientific developments as though they could be adequately analysed from the perspective of political movements even mistaking the phenomena of conversion for the rational appraisal of scientific theories Salmon has remained steadfastly devoted to isolating and justifying those normative standards distinguishing science from non science especially through the vindication of general principles of scientific procedure and the validation of specific examples of scientific theories without which science itself cannot be even remotely adequately understood In this respect Salmon exemplifies and strengthens a splendid tradition whose most remarkable representatives include Hans Reichenbach Rudolf Carnap and Carl G Hempel all of whom

exerted a profound influence upon his own development

The Conscious Mind David J. Chalmers, 1997 Writing in a rigorous thought provoking style the author takes us on a far reaching tour through the philosophical ramifications of consciousness offering provocative insights into the relationship between mind and brain

Essays in Honor of Hubert L. Dreyfus: Heidegger, authenticity, and modernity Mark A. Wrathall, Jeff Malpas, 2000 These essays focus on the dialogue with the continental philosophical tradition in particular the work of Heidegger that has played a foundational role in Dreyfus's thinking

Foundations of Speech Act Theory S.L. Tsohatzidis, 2002-09-11 Foundations of Speech Act Theory investigates the importance of speech act theory to the problem of meaning in linguistics and philosophy The papers in this volume written by respected philosophers and linguists significantly advance standards of debate in this area Beginning with a detailed introduction to the individual contributors this collection demonstrates the relevance of speech acts to semantic theory It includes essays unified by the assumption that current pragmatic theories are not well equipped to analyse speech acts satisfactorily and concludes with five studies which assess the relevance of speech act theory to the understanding of philosophical problems outside the area of philosophy of language

Social Anarchism and the Rejection of Moral Tyranny Jesse Spafford, 2023-11-02 This book provides an analytical defence of egalitarian anarchism arguing that there is a libertarian path to socialist conclusions

An Ontology of Consciousness R. Ellis, 2013-03-09 The object of this study is to find a coherent theoretical approach to three problems which appear to interrelate in complex ways 1 What is the ontological status of consciousness 2 How can there be an unconscious prereflective or self alienated consciousness And 3 Is there a self or ego formed by means of the interrelation of more elementary states of consciousness The motivation for combining such a diversity of difficult questions is that we often learn more by looking at interrelations of problems than we could by viewing them only in isolation The three questions posed here have emerged as especially problematic in the context of twentieth century philosophy 1 The question of the ontological status of consciousness The question What is consciousness is one of the most perplexing in philosophy so perplexing that many have been motivated to proceed as though consciousness did not exist If William James was speaking rhetorically when he said Consciousness does not exist 1 many behaviorists of the recent past were not 2 James meant only to imply that consciousness is not an independently existing soul substance alongside physical substances He did not mean that we do not really have consciousness and he did not provide final resolution for the problem of the causal interrelations between consciousness and the physical realm e.g. our bodies Many recent philosophers and psychologists however try to proceed as though these problems did not exist

How the Mind Uses the Brain Ralph Ellis And Natika Newton, 2011-01-19 With recent advances in artificial intelligence and neuroscience the nature of consciousness and the relation between mind and brain have become the most hotly debated topics in philosophy Yet agreement looks farther away than ever Ellis and Newton explain and argue for a bold new approach called enactivism showing how it cuts through various difficulties which have stumped previous theories At first glance enactivism itself seems open to fatal

objections but the authors demonstrate in detail that these objections disappear on closer examination How the Mind Uses the Brain represents a sharp break with the tradition which sees consciousness as the final step in a chain of causes and effects with information processing going on in the intervening steps This tradition has reduced consciousness to an appendage According to Ellis and Newton consciousness and emotions are central aspects of the organisms ongoing self organizational activity driving information processing rather than merely responding to it
