to produce more immune cells aiding your body's ability to fight the infection and they act in direct opposition to bacteria by inhibiting their ability to grow and reproduce so they cannot survive. The first line of defense against bacterial infection is prevention. Disinfecting surfaces with known antibacterial cleaners, maintaining good health through diet, rest, and exercise, and minimizing exposure to infectious agents is far more effective than any treatment plan in the continued battle against bacteria. Regardless of the preventative care you take, there are always times where treating an infection will be necessary. Traditionally, bacterial infection is fought by blending herbals that support the body's own natural defenses with those that act to inhibit and kill the bacteria. Using a combination that blends both actions helps to minimize the duration and severity of any infection. Many herbs and oils act as natural immunostimulants and antibacterial agents. Some of these natural products work as well as or even better than the products sold in your local pharmacy. Some of the items in your local pharmacy are even created based on the chemical constituents of plants you might have growing in your own yard. This guide contains antibacterial agents that act as both disinfectants for infected air and surfaces and disease-fighting agents for the body. Both categories eliminate harmful bacteria. It is important that you read the traditional uses and side effects of each plant and discuss any alternative treatment with a qualified herbalist or physician prior to choosing a natural product.

Tibes L. Antonio Curet, Lisa M. Stringer, 2010 The prehistoric civic ceremonial center of Tibes is located on the southern coast of Puerto Rico just north of the modern coastal city of Ponce Protected on two sides by a river and on the other two sides by hills this approximately 10.5 acre site remains as fertile and productive today as when first occupied over 2 000 years ago Such a rich region would have been a choice location for native peoples because of the diversity in all resources from land air and sea and also symbolically crucial as a liminal space within the landscape It may have been regarded as a space charged with numen or cosmic energy where different parts of the cosmos natural vs supernatural or world of the living vs world of the dead overlap Archaeological evidence reveals a long occupation about 1 000 years possibly followed by an extensive period of sporadic ceremonial use after the site itself was practically abandoned In this volume nineteen Caribbeanists examine the geophysical paleoethnobotanical faunal lithics base rock osteology bone chemistry and nutrition social landscape and ceremonial constructs employed at Tibes
