Katherine Kirkman, 2013-02-01. *The Natural Communities of Georgia* presents a comprehensive overview of the state's natural landscapes, providing an ecological context to enhance understanding of this region's natural history. Georgia boasts an impressive range of natural communities, assemblages of interacting species that have either been minimally impacted by modern human activities or have successfully recovered from them. This guide makes the case that identifying these distinctive communities and the factors that determine their distribution are central to understanding Georgia's ecological diversity and the steps necessary for its conservation. Within Georgia's five major ecoregions, the editors identify and describe a total of sixty-six natural communities, such as the expansive salt marshes of the barrier islands in the Maritime ecoregion, the fire-driven longleaf pine woodlands of the Coastal Plain, the beautiful granite outcrops of the Piedmont, the rare prairies of the Ridge and Valley, and the diverse coves of the Blue Ridge. With contributions from scientists who have managed, researched, and written about Georgia landscapes for decades, the guide features more than four hundred color photographs that reveal the stunning natural beauty and diversity of the state. The book also explores conservation issues, including rare or declining species, current and future threats to specific areas, and research needs, and provides land management strategies for preserving, restoring, and maintaining biotic communities. *The Natural Communities of Georgia* is an essential reference for ecologists and other scientists, as well as a rich resource for Georgians interested in the region's natural heritage. *Florida Wildlife*, 1999.
