Flesh of My Flesh Gregory E. Pence,1998 A collection of articles by Stephen Jay Gould Leon Kass William Safire Peter Steinfels and other scientists philosophers bioethicists theologians and law professors on the ethics of human cloning

Procreative Ethics Fritz Oehlschlaeger, 2010-01-01 Procreative Ethics addresses guestions at the beginning of life from a point of view that is alternatively philosophical and christian The author seeks to defend philosophically some positions taken partly on Christian grounds while also trying to make the implications of Christian convictions intelligible to those who do not necessarily share those convictions. The author positions himself neither as a moral friend nor moral stranger preferring instead the role of moral acquaintance to his audience From that position the goal is to find areas of fruitful agreement while clarifying differences that may lead to truer reconciliations further on in the conversation. The book opens with an attempted natural law defense of artificial contraception devotes four chapters to criticism of current defenses of abortion and then takes up in six remaining chapters such matters as genetic enhancement of children the justice or injustice of genetic revision the harm conundrum or non identity problem designing for disability and reproductive cloning Fritz Oehlschlaeger has written a remarkable book that needs to be read by everyone with a stake in moral questions at life s beginning Displaying theological and philosophical sophistication as well as a profound wisdom these arguments must be taken seriously by those who agree with Oeschlaeger as well as those who do not Joel James Shuman King's College Writing with a modesty that betrays the depth of argument that characterizes Procreative Ethics Fritz Oehlschlaeger has written the most important book in bioethics in recent memory Bioethics has long suffered from a stale imagination Oehlschlaeger an acknowledged outsider to the field brings to his work a fresh imagination shaped by literary texts and a profound humanity Hopefully many will want to emulate his work in other areas of bioethics Stanley Hauerwas Duke University In this new book Fritz Oehlschlaeger has made masterful and persuasive arguments about the moral challenges looming at the beginning of human life And he does this as a highly informed non specialist an English professor no less Robert Benne Roanoke College

Cloning Stephen D. Fairbanks, 2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is

transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes

Key Issues in Bioethics Ralph Levinson, Michael Reiss, 2003-12-16 Young people are increasingly being exposed to the huge and complex ethical dilemmas involved in issues such as genetic modification animal rights and cloning and they are bringing their views into the classroom But how can teachers be sure they are sufficiently well informed to help their pupils make sense of the diverse and emotive arguments surrounding these issues This book holds the answer Written by leading ethicists scientists and technologists it offers a balanced and jargon free guide to such highly debated topics as cloning in vitro fertilisation genetic screening and genetic engineering farm animal welfare the use of animals in medical experiments Written specifically for the non specialist teacher or lecturer this book offers suggestions on how to approach the teaching of bioethics and provides useful sources of further information It may also be of interest to undergraduates on science courses

On Cloning John Harris,2004 John Harris presents an informed defence of human cloning carefully exposing the rhetorical and highly dubious arguments against it He shows that far from ending the diversity of human life cloning has the power to improve and heal human life Contemporary Moral Issues Lawrence M. Hinman,2016-07-01 Contemporary Moral Issues is an anthology that provides a selection of readings on contemporary social issues revolving around three general themes Matters of Life and Death Matters of Equality and Diversity and Expanding the Circle which includes duties beyond borders living together with animals and environmental ethics The text contains a number of distinctive high profile readings and powerful narratives including Jonathan Foer's Eating Animals Eva Feder Kittay's On the Ethics of Selective Abortion for Disability and Susan M Wolf's Confronting Assisted Suicide and Euthanasia My Father's Death Each set of readings is accompanied by an extensive introduction a bibliographical essay pre reading questions and discussion questions

Rationality and the Genetic Challenge Matti Häyry,2010-02-11 Should we make people healthier smarter and longer lived if genetic and medical advances enable us to do so Matti H yry asks this question in the context of genetic testing and selection cloning and stem cell research gene therapies and enhancements The ethical questions explored include parental responsibility the use of people as means the role of hope and fear in risk assessment and the dignity and meaning of life Taking as a starting point the arguments presented by Jonathan Glover John Harris Ronald M Green J rgen Habermas Michael J Sandel and Leon R Kass who defend a particular normative view as the only rational or moral answer Matti H yry argues that many coherent rationalities and moralities exist in the field and that to claim otherwise is mistaken **Perfect**

Copy Jonathan Agar, 2009-09-03 Cloning is some of the most exciting science and one of the most keenly fought moral debates of our time Perfect Copy is a uniquely accessible exploration this most vexed and pressing issue In 1997 Ian Wilmut and his team announced that they had done what many thought to be impossible They had cloned a mammal from an adult cell This breakthrough prompted immediate calls for the new technology of mammalian cloning to be used on humans Italian fertility specialist Severino Antinori hopes to use cloning within two years to give 200 infertile couples the opportunity to at last become parents Cloning may also solve once and for all the problem of rejection that bedevils transplant surgery Perhaps it even holds the promise of eternal life But plans to clone humans have triggered a storm of protest Scientists including Wilmut politicians from left and right and theologians from almost all religions find the idea abhorrent We cannot possibly decide who is right in this debate unless we have a good understanding of what a human clone is and how one would be created Nicholas Agar unravels the science and the ethics of cloning and begins to show how we should approach this fantastically problematic area Performance, Ethics and Spectatorship in a Global Age H. Grehan, 2009-03-26 This book takes performance studies in exciting new directions exploring the ways in which ethics can be used to understand the complex guestions facing contemporary spectators Engaging with five key performances the book reflects on the emotional and intellectual impacts of politically inflected performance on spectators critics and theorists GenEthics and Religion Georg Pfleiderer, Gabriela Brahier, Klaus Lindpaintner, 2010-01-01 Human gene and cell technology is a diverse and rapidly evolving field of research As genes represent the blueprint of an organism their analysis and manipulation is a challenge to our understanding of human nature Stem cell research genetic testing gene therapy therapeutic and reproductive cloning all these fields of application have been raising fundamental ethical and religious theological questions When does human life begin Should human beings be allowed to interfere with natural procreation or to manipulate the genome of their own species Is genetic engineering tantamount to playing God Based on the symposium GenEthics and Religion held in Basel Switzerland in May 2008 this volume examines the role religion can play in establishing ethical guidelines to protect human life in the face of rapid advances in biology and especially gene technology It does so in a multidisciplinary way with contributions by philosophers theologians human geneticists and several bioethicists representing the Christian Jewish Islamic and Buddhist perspectives The essays illustrating a diversity of views and expressing the problems and self critical reflectiveness of religious ethicists have been brought up to date and discuss the importance of religious ethics in society s discourse on gene technology The Philosophical Animal Eduardo Mendieta, 2024-06-01 Humans are animals who fictionalize other animals to asse their humanness We are philosophical animals who philosophize about our humanity by projecting images onto a mirror about other animals Spanning literature philosophy and ethics the thread uniting The Philosophical Animal is the bestiary and how it continues to inform our imaginings Beginning with an exploration of animals and women in the literary work of Coetzee famous for his book on the Lives of Animals Eduardo Mendieta then dives into the

genre of bestiaries in order to investigate the relation between humanity and animality From there he approaches the works of Derrida and Habermas from the standpoint of genetic engineering and animal studies While we have intensely modified many species genetically we have not done this to ourselves Why Finally Mendieta deals with the political and ethical implications suggested by this question before ending on an autobiographical note about growing up around so called animals and in particular horses Soul of the Embryo David Albert Jones, 2004-12-23 Contemporary ethical debates about the status of the human embryo involve not only philosophical concerns but specifically religious arguments This is a systematic work on the history of Christian reflection on the human embryo A Feeling Intellect and a Thinking Heart Dane R. Gordon, 2002 This book addresses issues of philosophy and religion from a non Western as well as a Western perspective It argues that mind and emotion are both necessary namely and a feeling intellect and a thinking heat **Dolly Mixtures** Sarah Franklin,2007-04-11 A cultural analysis of Dolly the cloned sheep **Human Cloning** Barbara MacKinnon, 2000 From this collection readers will gain a clearer picture of the history of cloning in agriculture and animal science the various biological procedures that are encompassed by the term cloning the philosophical arguments in support of and opposed to cloning humans and the considerations that should inform discussions about public policy matters related to cloning research and to human cloning itself The Naked Clone John Charles Kunich, 2003-06-30 Banning therapeutic and reproductive cloning jeopardizes more than cloning itself The constitutional principles intertwined with cloning embrace such vital liberties as personal autonomy privacy reproduction and freedom of expression Properly understood cloning is essentially the same as other forms of assisted reproduction Procrustean bans on cloning implicate and indirectly threaten numerous key personal interests including abortion in vitro fertilization same sex adoption and surrogacy A government allowed to preemptively isolate and censor medico scientific research into cloning may be emboldened to shut down other forms of disfavored inquiry and expression as well Much of the animosity toward cloning is based on unfounded fear science fiction fantasy moralistic bias and slippery slope predictions most of which is scientifically untenable or already illegal Yet when people are cloned they will in fact be less similar than identical twins genetics aren t everything Differing environments produce differing people and human clones distinct individuals will be entitled to the same human rights and legal protections that have protected individuals for centuries Kunich establishes the pressing need to evaluate cloning in a rational scientific and legal manner before the extreme opposition sprouting from fear and misunderstanding which has already led to several state laws results in an unconstitutional federal ban **Human Genetics** Robert Song, 2002 A continuing series offering a unique approach to vital issues in the arena of Christian ethics. The books in the series are lively introductory explorations of contemporary issues that not only explain the moral positions that have been adopted but show how theological convictions shape these assessments Each book invites readers to engage in their own process of moral deliberation informed by their Christian beliefs Robert Song describes the attitudes beliefs and existential commitments as

well as the medical scientific and commercial pressures which have governed developments in modern medical genetics Ethics needs to be embodied and that involves an understanding not only of principle but also of context In the case of genetics a major part of that context is what has been called the technological imperative the drive to mastery of nature which serves significantly to structure our beliefs and actions whether we are aware of it or not whether we like it or not writes Song The book highlights the following topics Health Medicine and the New Genetics the Human Genome Project is set in the context of the Christian tradition's understanding of health and medicine Genetic Enhancement and the New Eugenics looks at the moral and theological issues behind genetic engineering Justice Community and Genetics discusses behavioral genetics the use of genetic information by insurers and gene patenting Technological Inevitability and Alternative Futures What futures can we imagine for genetic technology Lingua Franca ,1998 Designer Food Gregory E. Pence, 2002 The phrase genetically modified food conjures images of apples with eyeballs and tomatoes with toes But the true story behind this technology is much more complex that anyone may realize Join Pence's investigation of this latest public issue and take a front row seat at what will surely become the hottest debate since human cloning Reproductive Technology Charles P. Kindregan, Maureen McBrien, 2006 As more people turn to assisted reproduction the legal issues surrounding it have become increasingly complex Beyond representing patients or clinics numerous legal problems are arising from the technology s application Disputes in divorce are the most common but this technology impacts the law in other areas including personal injury insurance criminal law and estate planning Drawing from multiple legal sources this book presents complex information in a direct balanced and fair manner It includes glossary sample forms and checklists and bibliography
