Makers of Modern Strategy from Machiavelli to the Nuclear Age Peter Paret,Gordon A. Craig,Felix Gilbert,2010-10-01 Authoritative and convincing New York Times Book Review The classic reference on the theory and practice of war The essays in this volume analyze war its strategic characteristics and its political and social functions over the past five centuries The diversity of its themes and the broad perspectives applied to them make the book a work of general history as much as a history of the theory and practice of war from the Renaissance to the present Makers of Modern Strategy from Machiavelli to the Nuclear Age takes the first part of its title from an earlier collection of essays that became a classic of historical scholarship Three essays are repinted from the earlier book while four others have been extensively revised The rest twenty two essays are new The subjects addressed range from major theorists and political and military leaders to impersonal forces Machiavelli Clausewitz and Marx and Engels are discussed as are Napoleon Churchill and Mao Other essays trace the interaction of theory and experience over generations the evolution of American strategy for instance or the emergence of revolutionary war in the modern world Still others analyze the strategy of particular conflicts the First and Second World Wars or the relationship between technology policy and war in the nuclear age Whatever its theme each essay places the specifics of military thought and action in their political social and economic environment Together the contributors have produced a book that reinterprets and illuminates war one of the most powerful forces in history and one that cannot be controlled in the future without an understanding of its past

Writing the Heavenly Frontier Denice Turner,2011-03-10 Writing the Heavenly Frontier celebrates the early voices of the air as it examines the sky as a metaphorical and political landscape While flight histories usually focus on the physical dangers of early aviation this book introduces the figurative liabilities of ascension Early pilot writers not only grappled with an unwieldy machine they also grappled with poetics that were extremely selective Tropes that cast Charles Lindbergh as the transcendent hero of the new millennium were the same ones that kept women black Americans and indigenous peoples imaginatively tethered to the ground The most popular flight autobiographies in the United States posited a hero who rose from the mundane to the miraculous and yet the most startling autobiographies point out the social factors that limited or forbade vertical movement both literally and figuratively A survey of pilot writing the book will appeal to flight enthusiasts and people interested in American autobiography and culture But it will also appeal strongly to readers interested in the poetics and politics of place

Innovation and the Development of Flight Roger D. Launius,1999 Perhaps no technological development in the century has more fundamentally transformed human life than the airplane and its support apparatus The nature of flight and the activities that it has engendered throughout the world makes the development of aviation technology an important area of investigation Why did aeronautical technology take the shape it did Which individuals and organizations were involved in driving it What factors influenced particular choices of technologies to be used More importantly how has innovation affected this technology *Innovation and the Development of Flight* a first strike at the new aviation history represents a significant transformation of the field by relating the subject to larger issues of society politics and culture taking a more sophisticated view of the technology that few historians have previously attempted This volume moves beyond a focus on the artifact to emphasize the broader role of the airplane and more importantly the entire technological system This suggests that many unanswered questions are present in the development of modern aviation and that inquisitive historians seek to know the relationships of technological systems to the human mind Some of the subjects discussed are early aeronautical innovation and government patronage the evolution of relationships among airports cities and industry the relationship of engine development to the entire aviation industry the Department of Commerce s influence on light plane development pressure in the Air Force for the development of jet engines and lessons of the National Aerospace Plane Program Aviation historians and historians of technology will find *Innovation and the Development of Flight* a valuable examination of aeronautical innovation providing foundations for continued explorations of this field *The Publishers' Trade List Annual* ,1987 *The Literature of Aeronautics, Astronautics, and Air Power* Richard Hallion,1984

Pacific Passage Warren I. Cohen,1996 A study of relations between America and East Asia on the eve of the twenty first century **The Rarified Air of the Modern** Willie Hiatt,2016-09-05 From the moment news reached Peru in 1910 that Jorge Chavez Dartnell a pilot of Peruvian parentage had become the first man to fly across the Alps aviation fired the imagination of the masses in his home country His and other Peruvian pilots achievements generated great optimism that this technology could lift Peru out of its self perceived backwardness and transform it into a modern nation Though poor infrastructure economic woes a dearth of technical expertise and frequent pilot deaths slowed Peru s domestic aviation project diverse groups saw in airplanes their own visions for Peruvian renewal In this book Willie Hiatt shows how politicians

businessmen and military officials promoted the project as critical to the nation. At the same time indigenous communities and provincial residents willingly gave up land for airfields, raised money to purchase aircraft for the military, named airplanes after sponsoring civic groups, towns and regions, and breached police cordons at flying exhibitions to get close up looks at planes and pilots. By 1928 three commercial lines were transporting passengers and goods from far flung regions of the Amazon highlands and coast to Lima and beyond. Tracing the development of Peruvian aviation from heroic individual feats to essential infrastructure, *The Rarified Air of the Modern* shows how Peruvians mobilized airplanes to reflect their technological progress, their modern identity, and their nation's intertwining with the history of the West. *Technology and Culture*, 1985. *Flight in America, 1900-1983* Roger E. Bilstein, 1984. A comprehensive survey of the history of American aeronautics and space flight. *The Bloomsbury Review*, 1984.
