## **Flood Pulsing And Wetlands Restoring The Natural Hydrological Balance:**

*Flood Pulsing in Wetlands* Beth A. Middleton, 2002-10-01 The latest cutting edge research on flood pulsing and wetland restoration in North America Presenting the latest research from leaders in the field of restoration ecology *Flood Pulsing in Wetlands* reflects the current movement to incorporate flood pulsing into wetland restoration efforts Emphasizing how integral flood pulsing is to successful wetland restoration the book's contributors provide descriptions of restoration projects across North America in which flood pulsing has been primarily used to restore beneficial hydrodynamic conditions to floodplain areas and improve or save vegetation wildlife and terrain Detailing the importance and applicability of recreating flood pulsed conditions on floodplains for successful restoration the first chapter introduces the concept of flood pulse and its unique role in wetland restoration The following chapters detail the strategies and results of individual projects and the impact flood pulsing had on the projects overall goals Case studies detail the history of each region such as the Southwest including the Sonoran Desert communities and the Middle Rio Grande the Missouri River in Montana the Illinois River Valley and the Southeast including Brushy Lake Arkansas Also documented is the most famous case of flood pulsing used in the restoration of an entire landscape the Kissimmee River project Approaches used to restore specific plant and animal populations the unique ecological concerns of each region and the future outlook for each area are fully described Extensive bibliographies for each chapter make *Flood Pulsing in Wetlands Restoring the Natural Hydrological Balance* the essential reference for restoration ecologists consultants in wetland restoration government and restoration agency employees land managers ecologists foresters and geologists

**Creating and Restoring Wetlands** Christopher Craft, 2022-05-12 *Creating and Restoring Wetlands From Theory to Practice* Second Edition describes the challenges and opportunities relating to the restoration of freshwater and estuarine wetlands in natural agricultural and urban environments in the coming century This second edition is structured by clearly defined chapters based on specific wetland types e g Peatlands Mangroves and with a consistent and coherent organization for ease of discoverability The table of contents is divided into four main subjects Foundations Restoration of Freshwater Wetlands Restoration of Estuarine Wetlands and From Theory to Practice each with multiple chapters Part 1 Foundations contains chapters describing definitions of wetlands ecological theory used to guide restoration and considerations on where to implement restoration on the landscape In Parts 2 and 3 restoration of specific freshwater marshes forests peatlands and estuarine tidal marshes mangroves wetlands are described Part 4 From Theory to Practice contains chapters describing performance standards to gauge success of projects and case studies describing small scale and large scale restoration projects of various freshwater and estuarine wetlands Each chapter contains clearly labeled sections which assist the reader to quickly and easily key in on the subject matter that they are seeking The approach of *Creating and Restoring Wetlands* is unique in that in each chapter it links ecological theory important to ecosystem restoration with practical techniques to undertake and implement successful wetland restoration projects including

recommendations for performance standards to gauge success as well as realistic expectations and timescales for achieving success Each chapter ends with a summary table describing keys to ensure success for a given wetland ecosystem Each chapter ends with a summary table describing keys to ensure success for a given wetland ecosystem Written by a single author providing a consistent structure that is coherent cohesive and well referenced Contains case studies of small and large scale restoration activities ensuring relevance to individuals and organizations

**Geomorphic Approaches to Integrated Floodplain Management of Lowland Fluvial Systems in North America and Europe** Paul F. Hudson, Hans Middelkoop, 2015-04-29 This volume provides a comprehensive perspective on geomorphic approaches to management of lowland alluvial rivers in North America and Europe Many lowland rivers have been heavily managed for flood control and navigation for decades or centuries resulting in engineered channels and embanked floodplains with substantially altered sediment loads and geomorphic processes Over the past decade floodplain management of many lowland rivers has taken on new importance because of concerns about the potential for global environmental change to alter floodplain processes necessitating revised management strategies that minimize flood risk while enhancing environmental attributes of floodplains influenced by local embankments and upstream dams Recognition of the failure of old perspectives on river management and the need to enhance environmental sustainability has stimulated a new approach to river management The manner that river restoration and integrated management are implemented however requires a case study approach that takes into account the impact of historic human impacts to the system especially engineering The river basins examined in this volume provide a representative coverage of the drainage of North America and Europe taking into account a range of climatic and physiographic provinces They include the 1 Sacramento California USA 2 San Joaquin California 3 Missouri Missouri USA 4 Red Manitoba Canada and Minnesota USA 5 Mississippi Louisiana USA 6 Kissimmee Florida USA 7 Ebro Spain 8 Rhone France 9 Rhine Netherlands 10 Danube Romania and 11 Volga Russian Federation Rivers The case studies covered in these chapters span a range of fluvial modes of adjustment including sediment channel hydrologic regime floodplains as well as ecosystem and environmental associations

**Ecology of Threatened Semi-Arid Wetlands** Salvador Sánchez-Carrillo, David G. Angeler, 2011-04-23 Playing a critical role in both influencing climate change and mitigating its impacts the world's diverse wetlands have become one of the world's most threatened ecosystems as unsustainable land use practices coupled with irrational use of water have already resulted in large scale wetlands loss and degradation To develop sound management and conservation schemes to assure wetlands sustainability in the long term requires long term understanding of wetlands ecology Yet until now long term interdisciplinary research into these systems has been limited to only a few systems from tropical or temperate climates such as the Florida Everglades and Czech biosphere reserve This new book adds to the existing wetlands literature providing a unique reference in basic and applied Mediterranean wetland ecology based on results from long term interdisciplinary research at the RAMSAR and UNESCO Biosphere site of Las Tablas

de Daimiel Spain Dating back to the early 1990s the research highlights changes in the biotic and abiotic environment in response to cumulative anthropogenic stressors and provide guidance on applying this understand to sound management and conservation With particular relevance to researchers dealing with semi arid wetlands in the Mediterranean and elsewhere as well as to resource managers the book discusses the complexity of the interacting abiotic and biotic environment across different spatial and temporal scales and across various levels of biological hierarchy is highlighted and reveals how management based on poor knowledge causes more damage than repair The book will be of interest to researchers interested in freshwater ecology hydrobotany hydrology geology biogeochemistry landscape ecology and environmental management

Causal Factors for Wetland Management and Restoration: A Concise Guide Paul A. Keddy, 2023-03-11 This book presents 12 effective methods to manage wetlands for conservation It offers a tool box of causal factors that can be used to protect and restore wetlands to enhance biological diversity and other functions Each causal factor is introduced briefly explained and then illuminated with selected examples from around the world The book provides a prioritized shopping list of methods for protecting and restoring wetlands The three first and most important causal factors are flooding fertility and natural disturbance Then nine other causal factors are introduced including herbivory sedimentation roads invasive species and coarse woody debris Each causal factor is carefully linked to the scientific literature and explained using the author s own experience The same list of 12 causal factors applies around the world whether you are managing a temperate zone floodplain a tropical peatland a freshwater marsh or a coastal mangrove swamp Instead of hiring an expensive team of consultants or pouring through hundreds of scientific papers here is one concise guide to methods that can be immediately applied to benefit any wetland Professor Paul Keddy has spent more than 50 years studying wetlands and writing and lecturing about the environmental factors that control them He has published more than 150 scholarly papers and won multiple scientific prizes His book *Wetland Ecology* is widely used to teach the principles of wetland science *Causal Factors for Wetland Management A Concise Guide* has a much simpler message how to protect and enhance wetlands In this concise guide he has condensed a lifetime of experience into just 12 principles The book is aimed at all people who protect or restore wetlands park managers wildlife biologists landscape architects engineers environmental consultants environmental agencies conservation authorities and NGOs as well as landowners and concerned citizens *Causal Factors for Wetland Management A Concise Guide* is essential reading for anyone who cares for wetlands and wild places **Routledge**

**Handbook of Ecological and Environmental Restoration** Stuart K. Allison, Stephen D. Murphy, 2017-05-18 Ecological restoration is a rapidly evolving discipline that is engaged with developing both methodologies and strategies for repairing damaged and polluted ecosystems and environments During the last decade the rapid pace of climate change coupled with continuing habitat destruction and the spread of non native species to new habitats has forced restoration ecologists to re

evaluate their goals and the methods they use This comprehensive handbook brings together an internationally respected group of established and rising experts in the field The book begins with a description of current practices and the state of knowledge in particular areas of restoration and then identifies new directions that will help the field achieve increasing levels of future success Part I provides basic background about ecological and environmental restoration Part II systematically reviews restoration in key ecosystem types located throughout the world In Part III management and policy issues are examined in detail offering the first comprehensive treatment of policy relevance in the field while Part IV looks to the future Ultimately good ecological restoration depends upon a combination of good science policy planning and outreach all issues that are addressed in this unrivalled volume *Hydroecology and Ecohydrology* Paul J. Wood, David M. Hannah, Jon P. Sadler, 2008-04-07 This state of the art research level text considers the growing volume of research at the interface of hydrology and ecology and focuses on the evolution of hydroecology ecohydrology process understanding hydroecological interactions dynamics and linkages methodological approaches detailed case studies future research needs The editors and contributors are internationally recognised experts in hydrology and ecology from institutions across North America South America Australia and Europe Chapters provide a broad geographical coverage and bridge the traditional subject divide between hydrology and ecology The book considers a range of organisms plants invertebrates and fish provides a long term perspective on contemporary and palaeo systems and emphasises wider research implications with respect to environmental and water resource management *Hydroecology and Ecohydrology* is an indispensable resource for academics and postgraduate researchers in departments of physical geography earth sciences environmental science environmental management civil engineering water resource management biology zoology botany and ecology It is also of interest to professionals working within environmental consultancies organizations and national agencies Wetland Indicators Ralph W. Smiley, Jr., 2018-06-01 Most people do not realize it but the Midwest has been at the forefront of ecological restoration

longer than perhaps any other region in the United States dating back to the 1930s Because of its industrial history agricultural productivity and natural features such as the Great Lakes the Midwest has always faced a unique set of ecological challenges Focusing on six cutting edge case studies that highlight thirty restoration efforts and research sites throughout the region Iowa Indiana Illinois Wisconsin Michigan Minnesota and Ohio editors Christian Lenhart and Peter Rocky Smiley Jr bring together a group of scholars and practitioners to show how midwestern restoration efforts have developed as well as where they are headed Whether cleaning up contamination from auto plants in Ohio or restoring native prairie grasses along the Iowa highway the contributors uncover a vast network of interested citizens and volunteer groups committed to preserving the region's environment This study intended for researchers students and practitioners also provides an updated synthesis of restoration theory and practice and pinpoints emerging issues of importance in the Midwest such as climate change and the increase in invasive species it will bring to the region Though focusing exclusively on the Midwest the contributors demonstrate how these case studies apply to restoration efforts across the globe Contributors Luther Aadland David P Benson Andrew F Casper Hua Chen Joe DiMisa Steve Glass Heath M Hagy John A Harrington Neil Haugerud Constance Hausman Michael J Lemke Christian Lenhart Jen Lyndall Dan Shaw John A Shuey Peter C Smiley Jr Daryl Smith

*Estuarine Indicators* Stephen A. Bortone, 2004-12-28 Acknowledging the present inability to determine objectively the status and trends among estuarine ecosystems the environmental research community has recently stepped up efforts to develop and evaluate meaningful estuarine indicators This goal requires the effort of researchers from a broad spectrum of disciplines In order to expedite this initiative

**Wide Rivers Crossed** Ellen E. Wohl, 2013-06-15 In *Wide Rivers Crossed* Ellen Wohl tells the stories of two rivers the South Platte on the western plains and the Illinois on the eastern to represent the environmental history and historical transformation of major rivers across the American prairie Wohl begins with the rivers natural histories including their geologic history physical characteristics ecological communities and earliest human impacts and follows a downstream and historical progression from the use of the rivers resources by European immigrants through increasing population density of the twentieth century to the present day During the past two centuries these rivers changed dramatically mostly due to human interaction Crops replaced native vegetation excess snowmelt and rainfall carried fertilizers and pesticides into streams and levees dams and drainage altered distribution These changes cascaded through networks starting in small headwater tributaries and reduced the ability of rivers to supply the clean water fertile soil and natural habitats they had provided for centuries Understanding how these rivers and rivers in general function and how these functions have been altered over time will allow us to find innovative approaches to restoring river ecosystems The environmental changes in the South Platte and the Illinois reflect the relentless efforts by humans to control the distribution of water to enhance surface water in the arid western prairie and to limit the spread of floods and drain the wetlands along the rivers in the water abundant east *Wide Rivers Crossed* looks at these historical changes and discusses
