Geographic Perspectives on Water Resources ,2003 **Flood Hazard Management: British and International Perspectives** John W Handmer,1987-06-30 In some important respects floodplain management and flood hazard research is different in Britain from that in other countries This collection of papers from a conference provides some comparisons It covers urban flooding institutions and policy land use policy hazard response and project appraisal and risk assessment

Flood Problem and Management in South Asia M. Monirul Qader Mirza,Ajaya Dixit,Ainun Nishat,2013-03-09 Flood Problem and Management in South Asia focuses on both the hazard and the vulnerability aspects of floods This book addresses floods in South Asia from a multidisciplinary approach The characteristics and nature of the flood problem and its management aspects are examined It is suggested that flood control and management focused on structural solutions using embankments and reservoirs are insufficient Effective solutions must go beyond structural measures and require major restructuring of both legal systems and institutions responsible for management For those people living in the vast flood plains of South Asia to be able to overcome social economic and environmental vulnerabilities an adaptive approach to management of flood risks that identifies specific strategies is needed **Floods** Dennis J. Parker,2000 A comprehensive collection of new research An extensive range of case studies covering major floods and regions prone to flooding worldwide

Floods of the Tiber in Ancient Rome Gregory S. Aldrete,2007-03-05 A study of the impact of flooding on the ancient city during the classical period While the remains of its massive aqueducts serve as tangible reminders of Rome s efforts to control its supply of drinking water there are scant physical reminders that other waters sometimes raged out of control In fact floods were simply a part of life in ancient Rome where proximity to the Tiber left a substantial part of the city vulnerable to the river s occasional transgressions Here in the first book length treatment of the impact of floods on an ancient city Gregory S Aldrete draws upon a diverse range of scientific and cultural data to develop a rich and detailed account of flooding in Rome throughout the classical period Aldrete explores in detail the overflowing river s destructive effects drawing from ancient and modern written records and literary accounts analyses of the topography and hydrology of the Tiber drainage basin visible evidence on surviving structures and the known engineering methods devised to limit the reach of rising water He discusses the strategies the Romans employed to alleviate or prevent flooding their social and religious attitudes toward floods and how the threat of inundation influenced the development of the city s physical and economic landscapes Floods of the Tiber in Ancient Rome is that rare thing in scholarship a work that genuinely fills a gap in the scholarly literature Professor Aldrete has brilliantly illuminated an aspect of ancient Rome that was ever present to the

city's inhabitants but almost invisible to modern historians Stanley Burstein history teacher Raises important questions about the effects of flooding of the Tiber on the city of ancient Rome and its inhabitants and explores why Romans did not take more sweeping steps to reduce if not eliminate the dangers of urban flooding There is no comparable book length study of this topic so this work fills a real need It will be of interest not only to students of ancient history but to hydrologists and students of urban studies as well Certainly it will give us classicists much to think about in our assessment of urban life in ancient Rome Harry B Evans Fordham University author of *Aqueduct Hunting in the Seventeenth Century*

Applied Hydrometeorology Pukhraj Rakhecha, Vijay P. Singh, 2010-02-17 Water is vital for life Since the dawn of civilization much effort has been made to harness sources of fresh water Recent years have raised global awareness of the need for increasing demand of water worldwide largely because of growing population rising standard of living higher demand for energy and greater appreciation for environmental quality As an example the world population has increased threefold in the past five decades In order to meet the rising water demand water resources are being developed by building large dams reservoirs barrages and weirs across rivers worldwide The guiding principle for water resources development has been to ensure adequate supply of water for agriculture domestic use including fine drinking water waste disposal industries and energy production with due attention to maintain the ecosystem functions This development however depends on a holistic

cooperative and scientific approach The basic inputs in the assessment of water resources for a given region are from hydrological data and the subject of hydrology forms the core in achieving sustainable development of water resources Barring a few exceptions hydrological data for most river basins are sparse and therefore it is difficult to comprehensively assess their water resources The major source of water is rainfall which occurs as a result of condensation of atmospheric moisture governed by the science of meteorology
