Computational Creativity Research: Towards Creative Machines Tarek R. Besold, Marco Schorlemmer, Alan Smaill, 2014-12-04 Computational Creativity Concept Invention and General Intelligence in their own right all are flourishing research disciplines producing surprising and captivating results that continuously

influence and change our view on where the limits of intelligent machines lie each day pushing the boundaries a bit further By 2014 all three fields also have left their marks on everyday life machine composed music has been performed in concert halls automated theorem provers are accepted tools in enterprises R D departments and cognitive architectures are being integrated in pilot assistance systems for next generation airplanes Still although the corresponding aims and goals are clearly similar as are the common methods and approaches the developments in each of these areas have happened mostly individually within the respective community and without closer relationships to the goings on in the other two disciplines In order to overcome this gap and to provide a common platform for interaction and exchange between the different directions the International Workshops on Computational Creativity Concept Invention and General Intelligence C3GI have been started At ECAI 2012 and IJCAI 2013 the first and second edition of C3GI each gathered researchers from all three fields presenting recent developments and results from their research and in dialogue and joint debates bridging the disciplinary boundaries The chapters contained in this book are based on expanded versions of accepted contributions to the workshops and additional selected contributions by renowned researchers in the relevant fields Individually they give an account of the state of the art in their respective area discussing both theoretical approaches as well as implemented systems When taken together and looked at from an integrative perspective the book in its totality offers a starting point for a re integration of Computational Creativity Concept Invention and General Intelligence making visible common lines of work and theoretical underpinnings and pointing at chances and opportunities arising from the interplay of the three fields

Computational Approaches to Analogical Reasoning: Current Trends Henri Prade,Gilles Richard,2014-03-22 Analogical reasoning is known as a powerful mode for drawing plausible conclusions and solving problems It has been the topic of a huge number of works by philosophers anthropologists linguists psychologists and computer scientists As such it has been early studied in artificial intelligence with a particular renewal of interest in the last decade The present volume provides a structured view of current research trends on computational approaches to analogical reasoning It starts with an overview of the field with an extensive bibliography The 14 collected contributions cover a large scope of issues First the use of analogical proportions and analogies is explained and discussed in various natural language processing problems as well as in automated deduction Then different formal frameworks for handling analogies are presented dealing with case based reasoning heuristic driven theory projection commonsense reasoning about incomplete rule bases logical proportions induced by similarity and dissimilarity indicators and analogical proportions in lattice structures Lastly the volume reports case studies and discussions about the use of similarity judgments and the process of analogy making at work in IQ tests creativity or other cognitive tasks This volume gathers fully revised and expanded versions of papers presented at an international workshop as well as invited contributions All chapters have benefited of a thorough peer review process

Humanities in the Time of AI Laurent Dubreuil,2025-04-01 Why AI offers a chance for the humanities to strengthen their relevance and significance If humanistic research consists of the generation of consensus positions simple expression summarized texts or passable translations then we have arrived at the place where AI is able to

accomplish these different missions to a convincing degree However Laurent Dubreuil argues such tasks do not in any way constitute the humanities On the contrary he posits a maximalist take on scholarship would not focus on generation but on creation as a subject and as an object Dubreuil seizes the opportunity of what AI reveals about the meaning of humanistic inquiry to offer a path for the renewal of the humanities on transhistorical transcultural and transdisciplinary grounds
