Previous ed Harmondsworth Penguin 1968 by Nikolaus Pevsner      *Forest Land Resources, Requirements, Problems, and Policy* United States. National Resources Board. Land Planning Committee, 1935      Report on Land Planning ...: Forest land resources, requirements, problems, and policy United States. National Resources Board. Land Planning Committee, 1935  
*Forest Governance* Jessica Stubenrauch, Felix Ekardt, Katharina Hagemann, Beatrice Garske, 2022-04-22 This book analyses and develops overarching concepts for forest policy and forest governance and includes a detailed investigation into the historical discussion on forests It examines opportunities and limits for negative emissions in a sector that like peatlands appears significantly less ambivalent compared to highly technical large scale forms of climate geoengineering The analysis shows that the binding climate and biodiversity targets under international law are much more ambitious than most people assume Measured against that the volume critically reviews the potentials of afforestation and reforestation for climate mitigation which is often presented as the new saviour to fulfil the commitments of the Paris Agreement and to reach climate neutrality in the future It becomes clear that ultimately only biodiverse and thus resilient forests can function as a carbon sink in the long term The volume shows that the existing European and international forest governance approaches fail to comply with these targets and insights Furthermore the book develops a bundle of policy measures Quantity governance systems for livestock farming fossil fuels and similar drivers of deforestations represent the most important approach They are most effective when not directly targeting forests due to their heterogeneity but central damaging factors With regard to the dominant regulatory and subsidy based governance for forests we show that it remains necessary to supplement these quantity governance systems with certain easily graspable and thus controllable regulatory and subsidy regulations such as a regulatory protection of old growth forests with almost no exceptions extension of the livestock to land ratio established in organic farming to all farming far reaching restriction of bioenergy use to certain residues flanked by import bans and a national and international complete conversion of all agricultural and forest subsidies to public money for public services to promote nature conservation and afforestation in addition to the quantity control systems      **Forest Talk** Melissa Koch, 2019-01-01 Trees are essential They provide water shelter and food for millions of plant and animal species including humans They deliver proven health benefits and they capture and store carbon which combats climate change Yet trees are in trouble Forests are struggling to adapt to climate change and deforestation is a major threat Recently researchers and citizen scientists made the surprising revelation that trees communicate with each other through an underground system of soil fungi and other methods Complex social networks help trees survive and thrive by transferring resources to each other sending defense signals communicating with their kin and more Meet the tree scientists and learn more of their fascinating discoveries      *Enchanting Tales of Elf Forest* Mariken Karnas, 2011 Come on a trip through an enchanting forest where
