Lokhorst, P.W.G. Groot Koerkamp, 2023-09-04. Precision livestock farming is becoming ever more relevant as the agricultural industry struggles to come to terms with aspects such as animal welfare, animal disease, the environment, economics, traceability, robots, and livestock management. Whilst some benefits have proved elusive, others contribute positively to today's agriculture. Research continues to be necessary and needs to be reported and disseminated to a wide audience. These proceedings contain the reviewed papers from the 4th European Conference on Precision Livestock Farming. The papers reflect the wide range of disciplines that impinge upon precision livestock farming, including feeding, dairy, data quality, poultry, and pig applications, livestock environment, wireless sensing, dairy fertility, and calving management, animal identification, mastitis detection, and locomotion. The broad range of research topics reported are a valuable resource for researchers, advisors, teachers, and professionals in agriculture. Also note that the reviewed papers from the 7th European Conference on Precision Agriculture are presented in a companion publication. *Official Gazette of the United States Patent and Trademark Office*, 2004.

Mini and Micro Computers in Agriculture Maria G. Pisa, 1984.

Networking the Farm Randy Ziegenhorn, 2018-12-20. Published in 1999, this book presents the results of an ethnographic study of the emergence of co-operative production networks among hog farm workers in Iowa. In it, the author assesses both the internal organizational requirements for the successful network formation and the potential for networks to give farmers a competitive edge in the swine industry. Departing from the traditional emphasis on individual decision making in agricultural economies and economic anthropology, this book emphasizes instead the institutional setting in which such networks are formed. The author argues that networks succeed when they are closely tied to and reflective of local social

structure Those networks that attempt to employ a master plan designed by experts often fail Although many succesful networks exist networking has yet to achieve the economic clout enjoyed by large scale corporate swine producers The author describes the availability of credit for new swine production ventures in Iowa and shows the extent to which large scale producers have developed network like connections with banks packers and contract producers 2002 Year Book, Australia ,
