Contaminated Soil '95 W.J. van den Brink,R. Bosman,F. Arendt,2012-12-06 Towards sustainable land use Dr P Folstar Member of the TNO Board of Management Dr M Popp Chairman of the Board of Directors of Research Centre Karlsruhe FZK Ten years ago in 1985 TNO initiated the First Conference on Contaminated Soil in Utrecht At that time a rather complete inventory of suspected contaminated sites existed in The Netherlands Time had come to consider further actions for

investigations evaluation and remediation This concern has been spreading ever since to other European countries and throughout the world In particular German scientists and authorities soon recognized the significance of this problem and consequently joined TNO in organizing and funding a forum for discussions in a series of conferences Following three venues in German cities the 5th conference in Maastricht a Dutch as well as a European city marks the increasing interest in the international scientific and political community Application of the concept of sustainable development to soil as an essential element of human existence requires an answer to the question how to meet the needs of today's generation without impairing the possibilities of mankind in the future As we do not know the needs of the future especially regarding the functional requirements of soil use we can hardly do better than starting from the present priorities This can not mean to guarantee the quality of soil functions everywhere at any time

The Ecozones of the World Jürgen Schultz, 2013-06-29 The preliminary work on this book goes back to lectures and seminars which I held on the subject of an ecological division of the world at the Geographical Department of the Aachen University of Technology RWTH Aachen The idea of presenting this material in book form arose as I became aware that no modern compendium exists in either German or English or in any other language as far as I know which could have aided me in preparing these courses or would have helped the participating students to review the material presented in the classroom Existing studies on major land ecosystems some of which are highly detailed have been published over the past 15 years by firms such as the Springer Verlag Ecological Studies the Cambridge University Press International Biological Programme and the Elsevier Scientific Publishing Company Ecosystems of the World all suffer from the fact that individual aspects mainly botanical ecological ones are given the utmost consideration while other aspects often pedological and geomorphological ones are almost entirely neglected Furthermore it is most aggravating that the various studies have failed to establish consistent terminology units of measurement and organization of the data for all of the global ecosystems thus making it difficult even for the knowledgeable reader to make comparisons The individual nature of each ecozone therefore remains unclear since it is precisely these differences that allow those characteristics peculiar to a specific ecozone to be unmistakably recognized
