Farm Land Erosion:

Farm Land Erosion S. Wicherek, 2012-12-02 During the last twenty years mutations within agricultural systems in France and Europe have brought on a spectacular worsening of soil erosion and degradation This volume contributed to by scientists from 25 countries discusses how this risk can be evaluated and which solutions should be adopted without radically disturbing the socio economic orientation of major agricultural regions It is an excellent starting point for the development of new research themes and will be of great value to soil and environmental scientists and to all those involved in land irrigation and drainage *A Study of the Relation of Farm Land Tenure to Soil Erosion and Depletion in the United States* Otis T. Osgood, 1941 *Keeping the Land Alive* Hubert W. Kelley, 1983-01-01 bibliog *Do USDA Farm Program Participants Contribute to Soil Erosion?* K. H. Reichelderfer, 1985 Extract Only about one third of U S cropland with excessive soil erosion rates is operated by farmers who might be influenced to reduce erosion if changes were made in the U S Department of Agriculture s commodity and soil conservation programs The present commodity programs may conflict with conservation programs by encouraging the cultivation of erosive crops Efforts to increase the consistency of USDA commodity and conservation programs would contribute little to overcoming the Nation s total erosion problems Such efforts however should balance conservation objectives with objectives for farm income commodity prices production and export **Productivity Effects of Cropland Erosion in the United States** Pierre R. Crosson, 2016-03-17 In the 1970 s agriculture in the United States seemed to be booming With an extra demand for crops extra acres were taken on to increase production which was predicted to increase further with an ever growing population However concerns were beginning to be raised over the adequacy of land for crops as potential croplands began to be converted into urban areas as well as the effects of soil erosion decreasing the quality of these croplands Originally published in 1983 this study investigates the threats to crop productivity in the U S with a focus on human made problems This title will be of interest to students of environmental studies *Farm Land Erosion in Temperate Plains Environment and Hills* Stanislas Wicherek, 1993 *The Vanishing Farmland Crisis* John Baden, 2021-10-08 Newspapers seem to be telling us that every cornfield is threatened by a Dairy Queen This media barrage about the crisis of our shrinking farmland can be traced to the 1979 publication of *Where Have All the Farmlands Gone* by the National Agricultural Lands Study The NALS report to which eleven federal agencies contributed argued that land use planning and control must be employed to protect valuable farmland from urban sprawl This volume a collection of essays by a distinguished group of economists including Theodore W Schultz Julian L Simon and Pierre Crosson takes issue with the belief that croplands need governmental protection In opposition the collection as a whole supports two theses 1 shrinking farm acreage is not a serious problem and 2 individual choices by landowners in a market setting result in better organized land use than would governmental land use planning and regulation Published for the Political Economy Research Center Bozeman Montana **Impact of Farmland Abandonment on Water Resources and Soil Conservation** Noemí

Lana-Renault, Estela Nadal Romero, Erik Cammeraat, José Ángel Llorente, 2020-12-29 Farmland abandonment is one of the major land use changes occurring in many rural territories especially in mountainous regions Without intervention passive land management farmland abandonment leads to an expansion of shrubs and forest on formerly cultivated hillslopes and grazing areas All these land use changes affect the hydrological and geomorphological dynamics of slopes and channels having important implications for water resources and soil conservation However the heterogeneity of abandoned scenarios complicates the assessment of farmland abandonment on water resources and soil conservation In this Special Issue we will publish papers that examine the hydrological and geomorphological consequences of farmland abandonment in one or several of these abandoned scenarios Our final purpose is to help water and land managers to select the most sustainable strategy in terms of water resources and soil conservation for the land management of marginal rural areas *Minnesota's Farmland*, 1982 *Soil Erosion and Dryland Farming* Junliang Tian, Chi-Hua Huang, 2000-05-24 I've seen the Sudan traveled in South and Central America and been all over Europe but I've never seen what I've been able to see on this tour of the Loess Plateau China Ed Skidmore soil scientist Wind Erosion Research Unit of the Agricultural Research Service USDA Manhattan Kansas Overpopulation is at the core of most environmental problems The impacts of continued growth with world population reaching 6 billion in October 1999 are felt in most parts of the world China the most populous nation illustrates many of the pivotal problems and solutions Although China faces the same effects of overpopulation as the rest of the world it still feeds over a billion people on a tillable area that allows about one tenth of a hectare per person The country's efforts to tie together soil and water conservation dryland farming and economic development have been largely successful *Soil Erosion and Dryland Farming* explores these trials and the lessons learned from them Copublished with the Soil and Water Conservation Society this exhaustive text consists of the rewritten proceedings from the Society's conference held in Yangling Shaanxi China It covers dryland farming systems and soil water management environmental quality and sustainability and erosion control techniques as they relate primarily to Mainland China With additional global examples and a balance between conceptual and applied studies it covers some of the most progressive work in soil erosion control and dryland farming from around the world Soil exposure while land lies fallow is one of the greatest risks in dryland farming New procedures and kinds of tillage help control erosion and improve water intake *Soil Erosion and Dryland Farming* presents these techniques and technologies to give you a forward looking perspective into the field as well as the larger problem of tailoring food production to sustain the population *New York's Vanishing Farmland*, 1980 **Farm Land Development** J.
