**Civil Engineering : Karlsruhe Institute of Technology (KIT), 22 - 25 July 2012, Karlsruhe, Germany** Mueller, Harald S., 2012-07-20 The fib International PhD Symposium in Civil Engineering is an established event in the academic calendar of doctoral students. It is held under the patronage of the International Federation for Structural Concrete (fib), one of the main international associations that disseminates knowledge about concrete and concrete structures. The 9th fib International PhD Symposium was held at the Karlsruhe Institute of Technology (KIT) Germany from July 22 to 25, 2012. *Seismic Assessment and Retrofit of Reinforced Concrete Buildings* fib Fédération internationale du béton, 2003-08-01 In most parts of the developed world, the building stock and the civil infrastructure are ageing and in constant need of maintenance, repair and upgrading. Moreover, in the light of our current knowledge and of modern codes, the majority of buildings stock and other types of structures in many parts of the world are substandard and deficient. This is especially so in earthquake-prone regions as even there seismic design of structures is relatively recent. In those regions, the major part of the seismic threat to human life and property comes from old buildings. Due to the infrastructure's increasing decay frequently combined with the need for structural upgrading to meet more stringent design requirements, especially against seismic loads, structural retrofitting is becoming more and more important and receives today considerable emphasis throughout the world. In response to this need, a major part of the fib Model Code 2010 currently under development is being devoted to structural conservation and maintenance. More importantly, in recognition of the importance of the seismic threat arising from existing substandard buildings, the first standards for structural upgrading to be promoted by the international engineering community and by regulatory authorities alike are for seismic rehabilitation of buildings. This is the case, for example, of Part 3 Strengthening and Repair of Buildings of Eurocode 8, i.e. of the draft European Standard for earthquake-resistant design and which is the only one among the current 2003 set of 58 Eurocodes attempting to address the problem of structural upgrading. It is also the case of the recent 2001 ASCE draft standard on Seismic evaluation of existing buildings and of the 1996 Law for promotion of seismic strengthening of existing reinforced concrete structures in Japan. As noted in Chapter 1 of this Bulletin, fib as CEB and FIP did before has placed considerable emphasis on assessment and rehabilitation of existing structures. The present Bulletin is a culmination of this effort in the special but very important field of seismic assessment and rehabilitation. It has been elaborated over a period of 4 years by Task Group 7.1 Assessment and retrofit of existing structures of fib Commission 7 Seismic design, a truly international team of experts representing the expertise and experience of all the important seismic regions of the world. In the course of its work, the team had six plenary two-day meetings in January 1999 in Pavia, Italy; in August 1999 in Raleigh, North Carolina; in February 2000 in Queenstown, New Zealand; in July 2000 in Patras, Greece; in March 2001 in Lausanne, Switzerland; and in August 2001 in Seattle, Washington. In October 2002, the final draft of the Bulletin was presented to public during the 1st fib Congress in Osaka. It was also there that it was approved by fib Commission 7 Seismic Design. The contents is structured into main chapters as follows: 1 Introduction, 2 Performance objectives and system

considerations 3 Review of seismic assessment procedures 4 Strength and deformation capacity of non seismically detailed components 5 Seismic retrofitting techniques 6 Probabilistic concepts and methods 7 Case studies **NEHRP Recommended Provisions for Seismic Regulations for New Buildings and Other Structures, Part 2 - Commentary, 2000 Edition, March 2001**, 2001 **Connections between Steel and Concrete** Rolf Eligehausen, Werner Fuchs, Philipp Grosser, Giovacchino Genesio, 2012-02-27 Anchorage by fasteners and composite structures of steel and concrete have seen dramatic progress in research technology and application over the past decades The understanding of the fundamental principles underlying both disciplines has significantly improved Concurrently there has been rapid growth in the development of sophisticated new products and the establishment of international directives and codes to ensure their safe and economical use in a wide range of engineered structures Although they deal with very similar problems the two disciplines have developed independently from each other To optimize the use of composite structures and fastenings to concrete however it is necessary to have knowledge of both the local behavior of the fastening system and the global behavior of the structure It became apparent that a forum offering the opportunity to expand and to exchange experience in the field of connecting steel and concrete would benefit all involved Furthermore this forum would aid in the rapid dissemination of new ideas technologies and solutions as well as explore new areas of research This book forms the Proceedings of the 2 Symposium on Connections between Steel and Concrete As the 1 Symposium in 2001 it brought together leading experts from all facets of the research design construction and anchor manufacturing community from around the world Their lectures covered the topics test methods behavior and design dynamic loading shock earthquake fatigue durability exceptional applications strengthening and structures related topics In total 129 papers are gathered in these 2 volumes **3rd fib Congress Washington USA** FIB - International Federation for Structural Concrete, 2010-06-01

**Advances in Construction Materials 2007** Christian U. Grosse, 2007-08-14 This book addresses one of the most important material categories Materials used for constructions A large percentage of the gross national product of most countries goes into infrastructure and buildings This statement is true not only for the present but for most other periods in history and for most cultures This explains why understanding the behavior of construction materials has always been the object of intense investigations The construction industry consumes enormous volumes of material and the growing demand for quality and safety requires continuous improvement of materials and material compositions A deep understanding of material behavior is essential to enable efficient construction light weight or heavily burdened structures ask for the development of innovative composites or new material compositions Rapid economic growth and a dense and growing population require sensitive and sustainable use of resources Finally efficient use of resources means extending the usage of existing structures so non destructive testing methods are needed to assess the safety and utility of these structures Civil Engineers and Material Scientists from all over the world are openly discussing ideas for new materials and for structural health monitoring Over the last decade many innovations have come to fruition primarily in the field of composites but also for improving the design of existing material This is especially true for concrete perhaps the most used material in the world broadening its range of applications and improving performance

Decision Based Design Vijitashwa Pandey, 2013-08-26 In a presentation that formalizes what makes up decision based design Decision Based Design defines the major concepts that go into product realization It presents all major concepts in design decision making in an integrated way and covers the fundamentals of decision analysis in engineering design It also trains engineers to understand the impacts of design decision The author teaches concepts in demand modeling and customer preference modeling and provides examples This book teaches most fundamental concepts encountered in engineering design like concept generation multiattribute decision analysis reliability engineering design optimization simulation and demand modeling The book provides the tools engineering practitioners and researchers need to first understand that engineering design is best viewed as a sequence of

decisions made by the stakeholders involved and then apply the decision based design concepts in practice It teaches fundamental concepts encountered in engineering design such as concept generation multiattribute decision analysis reliability engineering design optimization simulation and demand modeling This book helps students and practitioners understand that there is a rigorous way to analyze engineering decisions taking into consideration all the potential technical and business impacts of their decisions It can be used in its entirety to teach a course in decision based design while selected chapters can also be used to cover courses in subdisciplines that make up decision based design *Seismic Retrofitting:*
