variety of competitive business applications in a secured environment Certainly not an easy task for any analyst designer Many organizations will continue to use packaged products and open source applications These third party products will need to be integrated into the new architecture paradigms and have seamless data aggregation capabilities while maintaining the necessary cyber compliances The book also clearly defines the roles and responsibilities of the stakeholders involved including the IT departments users executive sponsors and third party vendors The book s structure also provides a step by step method to help ensure a higher rate of success in the context of re engineering existing applications and databases as well as selecting third party products conversion methods and cybercontrols It was written for use by a broad audience including IT developers software engineers application vendors business line managers and executives
