Callaghan, 1953 An analysis of combined heat and mass transfer from a flat plate has been made in terms of Prandtl's simplified physical concept of the turbulent boundary layer. The results of the analysis show that for conditions of reasonably small heat and mass transfer the ratio of the mass and heat transfer coefficients is dependent on the Reynolds number of the boundary layer, the Prandtl number of the medium of diffusion and the Schmidt number of the diffusing fluid in the medium of diffusion. For the particular case of water evaporating into air the ratio of mass transfer coefficient to heat transfer coefficient is found to be slightly greater than unity. Foundations of Boundary Layer Theory for Momentum, Heat, and Mass Transfer Joseph A. Schetz, 1984 Heat Transfer, Mass Transfer, and Friction in Turbulent Boundary Layers Samson Semenovitch Kutateladze, A. I. Leont'ev, 1990 Reflects the growing practical applications for methods of computing the turbulent boundary layer based on relative limiting friction and heat exchange laws. Highlighted are conditions existing under two phase flow and novel applications of injection critical parameters. **Applications of Heat, Mass and Fluid Boundary Layers** R. O. Fagbenle, O. M. Amoo, S. Aliu, A. Falana, 2020-01-27 Applications of Heat Mass and Fluid Boundary Layers brings together the latest research on boundary layers where there has been remarkable advancements in recent years. This book highlights relevant concepts and solutions to energy issues and environmental sustainability by combining fundamental theory on boundary layers with real world industrial applications from among others the thermal nuclear and chemical industries. The book's editors and their team of expert contributors discuss many core themes including advanced heat transfer fluids and boundary layer analysis, physics of fluid motion and viscous flow, thermodynamics and transport phenomena alongside key methods of analysis such as the Merk-Chao-Fagbenle method. This book's multidisciplinary coverage will give engineers, scientists, researchers and graduate students in the areas of heat mass fluid flow and transfer a thorough understanding of the technicalities, methods and applications of boundary layers with a unified approach to energy, climate change and a sustainable future.
