## **Heat Transfer In Fluidized Beds:**

*Heat Transfer in Fluidized Beds* O. Molerus, Karl-Ernst Wirth, 1997-10-31 This book provides a much needed and thorough treatment of the heat transfer in agitated disperse systems It gives predictive equations for the heat transfer in moving beds bubbling and circulating fluidized beds pneumatic transport in vertical tubes and particulate fluidized beds Owing to the many different modes of activation of heat transfer the basic approach of the book is to provide experimental evidence of the relevance of particle motion to the proximity of solid surfaces for the heat transfer observed This has been achieved by the evaluation of experiments obtained with a newly developed pulsed light method using luminous particles *Heat Transfer in Fluidized Beds* will be of great use to students and researchers involved in heat transfer and thermodynamics

**Effectiveness of Gas-solid Contact ...** Welcome Willard Wamsley, L. N. Johanson, American Institute of Chemical Engineers, American Institute of Chemical Engineers. Annual Meeting, 1953 Gas solid heat transfer in fluidized beds was investigated by the transient heating of cold particles in a hot gas stream Transfer coefficients obtained from the rate of recovery of the gas temperature during the unsteady state heating of the particles are a measure of the overall performance of the fluidized bed The results are interpreted in terms of the gas flow characteristics observed It is shown that gas fluidized beds cannot be considered equivalent to a uniformly expanded fixed bed but that a portion of the entry gas must be regarded as effectively by passing the solid material present Using air and carbon dioxide as the fluidizing gases and glass spheres resin spheres and crushed alumina as solids the results obtained range from 0.07 BTU hr sq ft F for 100-115 mesh particles to 0.9 BTU hr sq ft F for 16-20 mesh particles but show no consistent influence of mass velocity These coefficients are less than those previously reported for fixed beds isolated particles or fluidized beds They are in agreement with reinterpreted results for the steady state evaporation of water from a fluidized solid      **Heat Transfer in Fluidized Beds of Low**
