Bitros, Nicholas C. Samuels, 2001-08-16 This collection summarizes the work of key historians of economics and attempts to quantify their impact The collection is authored by an impressive list of contributors many of whom are themselves well known in this field Statisticians of the Centuries P. Coppel, C.C. Heyde, S.E. Fienberg, E. Seneta, J. Gani, 2013-12-01 *Statisticians of the Centuries* aims to demonstrate the achievements of statistics to a broad audience and to commemorate the work of celebrated statisticians This is done through short biographies that put the statistical work in its historical and sociological context emphasizing contributions to science and society in the broadest terms rather than narrow technical achievement The discipline is treated from its earliest times and only individuals born prior to the 20th Century are included The volume arose through the initiative of the International Statistical Institute ISI the principal representative association

for international statistics founded in 1885 Extensive consultations within the statistical community and with prominent members of ISI in particular led to the names of the 104 individuals who are included in the volume The biographies were contributed by 73 authors from across the world The editors are the well known statisticians Chris Heyde and Eugene Seneta Chris Heyde is Professor of Statistics at both Columbia University in New York and the Australian National University in Canberra He is also Director of the Center for Applied Probability at Columbia He has twice served as Vice President of the ISI and also as President of the ISI's Bernoulli Society Eugene Seneta is Professor of Mathematical Statistics at the University of Sydney and a Member of the ISI His historical writings focus on 19th Century France and the Russian Empire He has taught courses on the history of probability based statistics in U S universities Both editors are Fellows of the Australian Academy of Science and have at various times been awarded the Pitman Medal of the Statistical Society of Australia for their distinguished research contributions

A History of Irish Economic Thought Thomas Boylan, Renee Prendergast, John Turner, 2013-03-01 For a country that can boast a distinguished tradition of political economy from Sir William Petty through Swift Berkeley Hutcheson Burke and Cantillon through to that of Longfield Cairnes Bastable Edgeworth Geary and Gorman it is surprising that no systematic study of Irish political economy has been undertaken In this book the contributors redress this glaring omission in the history of political economy for the first time providing an overview of developments in Irish political economy from the seventeenth to the twentieth century Logistically this is achieved through

the provision of individual contributions from a group of recognized experts both Irish and international who address the contribution of major historical figures in Irish political economy along the analysis of major thematic issues schools of thought and major policy debates within the Irish context over this extended period

Arthur L Bowley: A Pioneer In Modern Statistics And Economics Samuel Kotz, Andrew I Dale, 2011-04-15 Arthur Lyon Bowley the founding father of modern statistics was an important and colorful figure and a leader in cementing the foundations of statistical methodology including survey methodology and of the applications of statistics to economical and social issues during the late 19th and early 20th centuries In many respects he was ahead of his time The giants in this field around that time were largely concentrated in the British Isles and Scandinavian countries among these contributors Arthur Bowley was one of the most active in revolutionizing statistical methodology and its economic applications However Bowley has been vastly undervalued by subsequent commentators while hundreds of articles and books have been written on Karl Pearson those on Arthur Bowley amount to a dozen or less This book seeks to remedy this and fill in an important omission in the monographical literature on the history of statistics In particular the recent resurgence of interest in poverty research has led to a renewed interest in Bowley s legacy

Economics and Psychology Stavros Drakopoulos, Ioannis Katselidis, 2023-12-01 With the rise of modern behavioural economics and increasing interest in subjective well being research the question of the relationship between economics and psychology has again been brought to the fore Drawing on the history of economic thought this book explores the historical relationship between the two disciplines The book opens with a description of the primary philosophical foundations for early arguments supporting the interplay between economics and psychology Both classical economists and other prominent pre marginalists writers are examined in this context The ensuing discussion explores the marginalist revolution and how well known economists like Jevons and Edgeworth influenced by pre marginalist writers incorporated ideas and findings from psychology The book then describes how following the so called Paretian turn early neoclassical economists attempted to expel psychological concepts from economic analysis Combined with the increasing formalization the influence of the classical physics scientific ideal and the impact of positivism this methodological stance became dominant in modern mainstream economics In contrast non mainstream traditions continued to acknowledge the significance of psychology in their economic analysis This tradition includes inter alia the so called old behavioural economics mainly of Herbert Simon and George Katona The revival of psychology in economics came mainly with the emergence and development of new behavioural economics as a distinct branch during the last few decades The trend was further assisted by the emergence of the economics of subjective well being Finally the book briefly explores the state of the current debate concerning the relationship between economics and psychology This book will be invaluable reading to anyone interested in the history of the study of economics and psychology as well as of great interest to students and scholars of history of economic thought psychological economics behavioural economics and the history and philosophy of social sciences

Moral Discourse in the History of Economic Thought Laurent Dobuzinkis, 2022-06-23 Providing an account of the development of economic thought this book explores the extent to which economic ideas are rooted in moral values Adopting an approach rooted in pragmatism the work explores key questions which have been considered by economists since the classical political economists These include what degree of priority ought to be granted to property rights among all individual liberties whether uncertainties in economic life justify investing political authorities with the power to stabilize business cycles whether it is better to trust entrepreneurial initiatives to resolve societal dilemmas or to centralize policy making in the hands of a benevolent government The chapters argue that economic thought has evolved from an emphasis on sympathy as defined by Adam Smith and that there has more recently been a rediscovery of the significance of sympathy reinvented as fair reciprocity in the wake of the emergence of behavioural economics and its connection to evolutionary psychology This key book is of great interest to readers in the history of ideas political and moral philosophy and political economy

Economics as Literature William Henderson, 2006-06-07 A rich vein of economics writings which runs through the nineteenth century and beyond is now largely ignored because its authors were women or because they favoured literary over scientific forms Economics as Literature re examines some of the most interesting texts from within this tradition The works considered include stories eg by Maria Edgeworth and Harriet Martineau dialogues eg by Jane Marcet and Thomas de Quincey imaginative writing eg from Ruskin and Francis Edgeworth Keynes General Theory which is locked within a nineteenth century tradition of uniting science and art

Reviewing the Reviewer's of Keynes's a Treatise on Probability Michael Brady, 2016-09-24 The standard view of the economics profession is that Keynes was a brilliant intuitive nonrigorous innovator These essays show that Keynes backed up his intuitions with a rigorous mathematical and logical supporting analysis which has been overlooked

International Bibliography of Economics 1994 British Library of Political and Economic Science at the London School of Economics, 1995 The IBSS is the essential tool for librarians university departments research institutions and any public or private institutions whose work requires access to up to date and comprehensive knowledge of the social sciences

The Active Consumer Marina Bianchi, 2006-05-10 The Active Consumer discusses how consumers seem to delight in trying new solutions and exploring new combinatory possibilities This book provides an economic theoretical understanding of this phenomenon and the many ways in which innovation can structure consumer choice The authors show from different points of view how central novelty can be in consumer behaviour how it relates to technical change and how new consumer capabilities are developed and organized

Reassessing the Paradigm of Economics Valeria Mosini, 2011-07-28 When President Reagan and Prime Minister Thatcher adopted the neoliberal doctrine as the paradigm of economics there was no evidence that the move would have been successful but thirty years on the recurrent crises that culminated in 2008 suggest a serious mis match between expectations and outcomes a re examination of the paradigm is in order This book focuses on Milton Friedman s formulation of the neoliberal doctrine and

analyses two aspects that were essential to turning it into a fully fledged paradigm the attribution of scientific status to positive economics which led to informing public policies on the requirements of the market and the characterisation of economic freedom as capable of promoting political freedom which led to identifying free market with democracy The book exposes Friedman s methodological argument for attributing positive economics scientific status as a failure and his characterisation of economic freedom as a delusion it identifies in the emergence as the mainstream in economics of the neoclassical synthesis which borrowed from Walras the mathematical treatment of equilibrium but not the ethical and social framework in which it was inscribed a development that facilitated the transition from the Keynesian to the neoliberal paradigm Dr Mosini shows that the gigantic bail outs carried out courtesy of the public purse which institutionalised the practice of collectivising losses while keeping profits private were no accident but the consequence of the rethinking of the function of lender of last resort according to Friedman s conception of rationality in relation to risk combined with his interpretation of the 1930s recession The book concludes that the neoliberal paradigm has served the interests of the economically powerful social strata it was designed to benefit extremely well but that the deep and deepening injustice it has brought about calls for a complete rethinking of the paradigm of economics according to ethical principles respectful of human values This book should be of interest to students and researchers of Political Economy Economic Methodology History of Economic Thought and Philosophy

How Economics Became a Mathematical Science E. Roy Weintraub, 2002-05-28 Discusses the history of 20th century economics and how it has become dominated by mathematical approaches

The Natural Origins of Economics Margaret Schabas, 2009-05-15 References to the economy are ubiquitous in modern life and virtually every facet of human activity has capitulated to market mechanisms In the early modern period however there was no common perception of the economy and discourses on money trade and commerce treated economic phenomena as properties of physical nature Only in the early nineteenth century did economists begin to posit and identify the economy as a distinct object divorcing it from natural processes and attaching it exclusively to human laws and agency In *The Natural Origins of Economics* Margaret Schabas traces the emergence and transformation of economics in the eighteenth and nineteenth centuries from a natural to a social science Focusing on the works of several prominent economists David Hume Adam Smith Thomas Malthus David Ricardo and John Stuart Mill Schabas examines their conceptual debt to natural science and thus locates the evolution of economic ideas within the history of science An ambitious study *The Natural Origins of Economics* will be of interest to economists historians and philosophers alike

The Economy in its house Marcel Aucoin, 2020-02-03 T00:00:00+01:00 The title *The Economy in its House* echoes Xenophon s book *oconomicus* which focuses on the relationship of a house with its environment rather than on trade It also makes reference to a question from Socrates What is a house It is by striving to explore these relationships and questions reflecting the conditions of our time that we have concluded that the economy is in its house and that changes everything Indeed this

leads us to establish a foundation new but grafted onto ancient roots for economics By integrating into our theory the unpredictable environment we provide economists with a framework to address the multiple issues that arise not only in our common home the Earth but also to all other houses Our model is based on the hypothesis of the random nature of the economy which brings us closer to modern physics and its methods On these pillars our model abstracts economic agents and focuses attention on the interconnected constituents of the house both their mutual statistical relationships and those they have with the environment The covariance matrix that retraces such relationships indicates how the environment disrupts on average each constituent during a period This gives the possibility to explore the destinies of the houses in the short middle or long run through crises and changing perspectives of ruin It makes it possible to identify three essential variables the growth factor the growth energy and finally the prices root which is also the weight of the unit of account and an anti ruin coefficient One of the characteristics of modern houses is that among their constituents positive covariances outweigh negative covariances Hence their growth we explore its links with the reduction of inequalities and its pathologies pollution and depletion of resources We shows how we can fight against crises and inequalities through greater solidarity We show that one can model any house by use of a miniature house its soul with two components the hearth and the roof and three guiding parameters exposure to hazards security and performance With these guides one expresses all the macroeconomic variables relative to a house These are preserved by passing from a house whatever its importance to its soul The wealth of the results obtained shows that the path open must allow economists to go farther and safer in their work while also enabling a broader public to better understand what the economy is

William Stanley Jevons and the Making of Modern Economics Harro Maas, 2005-04-04 This book examines William Stanley Jevons s role in revolutionizing nineteenth century economics
