*Health Effects of Exposure to Low-Level Ionizing Radiation*, William R. Hendee, F. Marc Edwards, 1996-01-01 The question of the risks associated with low level exposure to ionizing radiation and the associated statutory limitations on exposure remains a topic of vigorous debate amongst medical and health physicists clinical radiologists and members of the public *Health Effects of Exposure to Low Level Ionizing Radiation* presents a comprehensive consideration of these issues within a solid historical and scientific framework It provides a thorough and understandable discussion of radiation sources health effects radiation protection and worker and public perception and education about radiation *Health Effects of Exposure to Low Levels of Ionizing Radiations* National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Health Effects of Exposure to Low Levels of Ionizing Radiations (BEIR VII), 1998-09-04 The US Environmental Protection Agency Office of Radiation and Indoor Air asked the National Research Council to evaluate whether sufficient new data exist to warrant a reassessment of health risks reported in *Health Effects of Exposure to Low Levels of Ionizing Radiations* BEIR V in 1990 To respond to this request the National Research Council assembled the Committee on Health Risks of Exposure to Low Levels of Ionizing Radiations The work of the committee was conducted in what was called the BEIR VII phase 1 study To assist the committee during its deliberations various scientists were consulted for advice and a workshop on the impact of biology on risk assessment was held in collaboration with the Department of Energy Office of Health and Environmental Research The intent of the workshop was to address the implications of new understanding of the biologic basis of radiation injury and carcinogenesis for risk assessment [Health Risks from Exposure to Low Levels of Ionizing Radiation](#) Committee to Assess Health Risks from Exposure to Low Levels of Ionizing Radiation, National Research Council, 2006-03-23 This book is the seventh in a series of titles from the National Research Council that addresses the effects of exposure to low dose LET Linear Energy Transfer ionizing radiation and human health Updating information previously presented in the 1990 publication *Health Effects of Exposure to Low Levels of Ionizing Radiation* BEIR V this book draws upon new data in both epidemiologic and experimental research Ionizing radiation arises from both natural and man made sources and at very high doses can produce damaging effects in human tissue that can be evident within days after exposure However it is the low dose exposures that are the focus of this book So called late effects such as cancer are produced many years after the initial exposure This book is among the first of its kind to include detailed risk estimates for cancer incidence in addition to cancer mortality BEIR VII offers a full review of the available biological biophysical and epidemiological literature since the last BEIR report on the subject and develops the most up to date and comprehensive risk estimates for cancer and other health effects from exposure to low level ionizing radiation [Health Effects of Exposure to Low Levels of Ionizing Radiation](#) National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on the Biological Effects of Ionizing Radiation (BEIR V), 1990-02-01 This

book reevaluates the health risks of ionizing radiation in light of data that have become available since the 1980 report on this subject was published. The data include new much more reliable dose estimates for the A bomb survivors, the results of an additional 14 years of follow up of the survivors for cancer mortality, recent results of follow up studies of persons irradiated for medical purposes and results of relevant experiments with laboratory animals and cultured cells. It analyzes the data in terms of risk estimates for specific organs in relation to dose and time after exposure and compares radiation effects between Japanese and Western populations.
