Mass Transfer with Chemical Reaction in Multiphase Systems E. Alper, 2013-11-11 The phenomenon of mass transfer with chemical reaction takes place whenever one phase is brought into contact with one or more other phases not in chemical equilibrium with it This phenomenon has industrial biological and physiological importance In chemical process engineering it is encountered in both separation processes and reaction engineering In some cases a chemical reaction may deliberately be employed for speeding up the rate of mass transfer and or for increasing the capacity of the solvent in other cases the multiphase reaction system is a part of the process with the specific aim of product formation Finally in some cases for instance distillation with chemical reaction both objectives are involved Although the subject is clearly a chemical engineering undertaking it requires often a good understanding of other subjects such as chemistry and fluid mechanics etc leading to publications in diversified areas On the other hand the subject has always been a major field and one of the most fruitful for chemical engineers

Principles of Convective Heat Transfer Massoud Kaviany, 2013-11-21 Convective heat transfer is the result of fluid flowing between objects of different temperatures Thus it may be the objective of a process as in refrigeration or it may be an incidental aspect of other processes Intended for graduate students and for researchers entering the field this text reviews in a concise and unified manner recent contributions to the principles of convective heat transfer for single and multiphase systems It summarizes the role of the fundamental mechanism and the governing differential equations describes approximation schemes and phenomenological models and examines their solutions and applications After a review of the basic physics and thermodynamics the book divides the subject into three parts Part 1 deals with single medium transfers specifically with intraphase transfers in single phase flows and with intramedium transfers in two phase flows Part 2 deals with fluid solid transfer processes both in cases where the interface is small and in cases where it is large as well as liquid liquid transfer processes Part 3 considers three media addressing both liquid solid solid and gas liquid solid systems The emphasis is on the presence multiple phases and on

energy conversion mechanisms such as phase changes or chemical reactions will make this text a valuable reference for practicing engineers This new edition has been updated throughout and contains new examples and problems
