**Forest Ecology** Dan Binkley, 2021-07-26 Forest Ecology Forest Ecology An Evidence Based Approach Forest ecology is the science that deals with everything in forests including plants and animals and their interactions the features of the environment that affect plants and animals and the interactions of humans and forests All of these components of forests interact across scales of space and time Some interactions are constrained deterministic and predictable but most are indeterminant contingent and only broadly predictable Forest Ecology An Evidence Based Approach examines the features common to all forests and those unique cases that illustrate the importance of site specific factors in determining the structure function and future of a forest The author emphasizes the role of evidence in forest ecology because appealing simple stories often lead to

misunderstandings about how forests work A reliance on evidence is central to distinguishing between appealing stories and stories that actually fit real forests The evidence based approach emphasizes the importance of real world observable science in forests Classical approaches to ecology in the twentieth century often over emphasized appealing concepts that were not sufficiently based on real forests The vast amount of information now available on forests allows a more complete coverage of forest ecology that relies on a strong empirical foundation Forest Ecology An Evidence Based Approach is the ideal companion text for the teaching of upper level undergraduate and graduate courses in forest ecology **Canadian Books in Print 2002** Marian Butler,2002-02 *Yellowstone Wolves* Douglas W.
