Elliptic Differential Equations And Obstacle Problems:

Elliptic Differential Equations and Obstacle Problems Giovanni Maria Troianiello, 1987-07-31 In the few years since their appearance in the mid sixties variational inequalities have developed to such an extent and so thoroughly that they may now be considered an institutional development of the theory of differential equations with appreciable feedback as will be shown This book was written in the light of these considerations both in regard to the choice of topics and to their treatment In short roughly speaking my intention was to write a book on second order elliptic operators with the first half of the book as might be expected dedicated to function spaces and to linear theory whereas the second nonlinear half would deal with variational inequalities and non variational obstacle problems rather than for example with quasilinear or fully nonlinear equations with a few exceptions to which I shall return later This approach has led me to omit any mention of physical motivations in the wide sense of the term in spite of their historical and continuing importance in the development of variational inequalities I here addressed myself to a potential reader more or less aware of the significant role of variational inequalities in numerous fields of applied mathematics who could use an analytic presentation of the fundamental theory which would be as general and self contained as possible *Obstacle Problems in Mathematical Physics* J.-F.

Rodrigues, 1987-03-01 The aim of this research monograph is to present a general account of the applicability of elliptic variational inequalities to the important class of free boundary problems of obstacle type from a unifying point of view of classical Mathematical Physics The first part of the volume introduces some obstacle type problems which can be reduced to variational inequalities Part II presents some of the main aspects of the theory of elliptic variational inequalities from the abstract hilbertian framework to the smoothness of the variational solution discussing in general the properties of the free boundary and including some results on the obstacle Plateau problem The last part examines the application to free boundary problems namely the lubrication cavitation problem the elastoplastic problem the Signorini or the boundary obstacle problem the dam problem the continuous casting problem the electrochemical machining problem and the problem of the flow with wake in a channel past a profile *Analysis and Topology in Nonlinear Differential Equations* Djairo G de Figueiredo, João

Marcos do Ó, Carlos Tomei, 2014-06-16 This volume is a collection of articles presented at the Workshop for Nonlinear Analysis held in Jo o Pessoa Brazil in September 2012 The influence of Bernhard Ruf to whom this volume is dedicated on the occasion of his 60th birthday is perceptible throughout the collection by the choice of themes and techniques The many contributors consider modern topics in the calculus of variations topological methods and regularity analysis together with novel applications of partial differential equations In keeping with the tradition of the workshop emphasis is given to elliptic operators inserted in different contexts both theoretical and applied Topics include semi linear and fully nonlinear equations and systems with different nonlinearities at sub and supercritical exponents with spectral interactions of Ambrosetti Prodi type Also treated are analytic aspects as well as applications such as diffusion problems in mathematical genetics and finance

Mathematical Models for Registration and Applications to Medical Imaging Otmar Scherzer, 2006-10-03 Image registration is an emerging topic in image processing with many applications in medical imaging picture and movie processing The classical problem of image registration is concerned with finding an appropriate transformation between two data sets This fuzzy definition of registration requires a mathematical modeling and in particular a mathematical specification of the terms appropriate transformations and correlation between data sets Depending on the type of application typically Euler rigid plastic elastic deformations are considered The variety of similarity measures ranges from a simple L_1 distance between the pixel values of the data to mutual information or entropy distances This goal of this book is to highlight by some experts in industry and

medicine relevant and emerging image registration applications and to show new emerging mathematical technologies in these areas. Currently many registration applications are solved based on variational principles requiring sophisticated analysis such as calculus of variations and the theory of partial differential equations to name but a few. Due to the numerical complexity of registration problems efficient numerical realizations are required. Concepts like multi level solver for partial differential equations, non convex optimization and so on play an important role. Mathematical and numerical issues in the area of registration are discussed by some of the experts in this volume. Moreover the importance of registration for industry and medical imaging is discussed from a medical doctor and from a manufacturer point of view.

Boundary Control and Variation Jean-Paul Zolesio, 1994-07-28 Based on the Working Conference on Boundary Control and Boundary Variation held in Sophia Antipolis France this work provides important examinations of shape optimization and boundary control of hyperbolic systems including free boundary problems and stabilization. It offers a new approach to large and nonlinear variation of the boundary using global Eulerian coordinates and intrinsic geometry.

Trails in Kinetic Theory Giacomo Albi, Sara Merino-Aceituno, Alessia Nota, Mattia Zanella, 2021-07-15 In recent decades kinetic theory originally developed as a field of mathematical physics has emerged as one of the most prominent fields of modern mathematics. In recent years there has been an explosion of applications of kinetic theory to other areas of research such as biology and social sciences. This book collects lecture notes and recent advances in the field of kinetic theory of lecturers and speakers of the School Trails in Kinetic Theory: Foundational Aspects and Numerical Methods hosted at Hausdorff Institute for Mathematics HIM of Bonn Germany 2019 during the Junior Trimester Program Kinetic Theory Focusing on fundamental questions in both theoretical and numerical aspects it also presents a broad view of related problems in socioeconomic sciences, pedestrian dynamics and traffic flow management.

Recent Advances in Nonlinear Analysis Michel Chipot, 2008 This volume considers the most recent advances in various topics in partial differential equations. Many important issues such as evolution problems, their asymptotic behavior and their qualitative properties are addressed. The quality and completeness of the articles make this book both a source of inspiration and reference for future research.
