Emergence Of Man:

The Emergence of Man John E. Pfeiffer, 1972 The Emergence of Man Gerald Heard, 1931 **The Evolution of Man** Wilhelm Bölsche, 1906 The Emergence of Humans Patricia J. Ash, David J. Robinson, 2010-05-10

The Emergence of Humans is an accessible informative introduction to the scientific study of human evolution. It takes the reader through time following the emergence of the modern human species *Homo sapiens* from primate roots. Acknowledging the controversy surrounding the interpretation of the fossil record, the authors present a balanced approach in an effort to do justice to different views. Each chapter covers a significant time period of evolutionary history and includes relevant techniques from other disciplines that have applications to the field of human evolution. Self-assessment questions linked to learning outcomes are provided for each chapter together with further reading and reference to key sources in the primary literature. The book will thus be effective both as a conventional textbook and for independent study. Written by two authors with a wealth of teaching experience, *The Emergence of Humans* will prove invaluable to students in the biological and natural sciences needing a clear balanced introduction to the study of human evolution.

The Origin and Evolution of Humans and Humanness D. Tab Rasmussen, 1993. This volume represents the proceedings of the Irving Stone Memorial Symposium on The Origin of Humans and Humanness. Scientists in the fields of anthropology, archaeology, biology, and ecology were invited to discuss their research concerning the hows, wheres, and whys of the evolutionary history of humans. Using our knowledge of the behavior and reproduction of living primates, chapter 1 describes what made the earliest human-like animals of 4 million years ago different from their ape relatives. While showing how the science of paleontology works, the origin of our genus *Homo* is discussed in chapter 2. With emphasis on those humans who first made regular use of stone tools some 2 million years ago, chapter 3 interprets ancient human behavior and ecology from an archaeological perspective. Tools from genetics, molecular biology, archaeology, and paleontology are used to examine the origin of modern *Homo sapiens* in chapter 4. Chapter 5 looks at the artistry of Ice Age craftsmen. Finally, using computer methods, chapter 6 delves into the complex issue of how human behavior changes and what is the relationship between biological and cultural evolution.
