Serna-Saldivar, 2012-02-16 Emphasizing the essential principles underlying the preparation of cereal based products and demonstrating the roles of ingredients Cereal Grains Laboratory Reference and Procedures Manual is a practical laboratory manual complementing the author's text Cereal Grains Properties Processing and Nutritional Attributes Organized so that Handbook of Cereal Science and Technology, Revised and Expanded Karel Kulp, 2000-03-28 This thoroughly readers revised second edition addresses the full spectrum of cereal grain science employing agronomic chemical and technological perspectives and providing new and expanded treatment of food enrichment techniques nutritional standards and product quality evaluation Written by over 40 internationally respected authorities the Handbook of Breadmaking Technology C. A. Stear, 2012-12-06 The author's aim in writing this book is to integrate currently available knowledge concerning the basic scientific and technological aspects of breadmaking processes with the diverse breadmaking methods used to manufacture bread in Europe and on the North American continent today To date the main technological advances have been in process mechanization starting with oven development then dough processing or make up equipment followed by continuous and batch mixing techniques from the 1950s to the present time On the engineering side universal emphasis is now being placed on the application of high technology in the form of microprocessors computer controlled equipment and robotization the long term objective being computer integrated manufacture CIM with full automation within the large chain bakery groups in the capitalist countries and the state run collectives of Eastern Europe The application of these key technologies with biotechnology as yet only applied to a limited degree in food manufacture coupled with advances in biochemical and rheological understanding of dough as a biomass for breadmaking should provide us with more expertise and ability to control the processes with greater efficiency. The application of fermentable substrates and industrial enzymes under strict kinetic control should contribute to improving the flavour characteristics of bread Current trends towards improving the nutritional contribution of bread to the daily diet are improving the competitive edge of bread as a basic food in the market Handbook on Sourdough Biotechnology Marco Gobbetti, Michael Gänzle, 2012-12-12 In the last few decades place many efforts have been made to exploit sourdough s potential for making baked goods Through the biotechnology of this traditional baking method many sensory rheological nutritional and shelf life properties have been discovered and or rediscovered Bakery industries are greatly attracted by the potentials that sourdough presents and new industrial protocols are being developed To the best of our knowledge there has been no single book dedicated to sourdough biotechnology and which clearly demonstrate its potential This book aims at defining and highlighting the microbiological technological nutritional and chemical aspects of sourdough biotechnology The book will be the first reference guide on this topic for the worldwide scientific teaching and students communities also opening a way of communication and transferring the main
