

A New Method of Extension of Local Maps of Banach Spaces. Applications and Examples

Genrich Belitskii and Victoria Rayskin

ABSTRACT. A known classical method of extension of smooth local maps of Banach spaces uses smooth bump functions. However, such functions are absent in the majority of infinite-dimensional Banach spaces. This is an obstacle in the development of local analysis, in particular in the questions of extending local maps onto the whole space. We suggest an approach that substitutes bump functions with special maps, which we call *blid maps*. It allows us to extend smooth local maps from non-smooth spaces, such as $C^q[0, 1]$, $q = 0, 1, \dots$. As an example of applications, we show how to reconstruct a map from its derivatives at a point, for spaces possessing blid maps. We also show how blid maps can assist in finding global solutions to cohomological equations having linear transformation of argument.

1. Introduction

With the advancement of dynamical systems and analysis, the complexity of global analysis became evident. This stimulated the development of techniques for the study of local properties of a global problem. One of the methods of localization is based on the functions with bounded support. The history of applications of functions vanishing outside of a bounded set goes back to the works of Sobolev ([S]) on generalized functions.¹ Later, functions with bounded support were used by Kurt Otto Friedrichs in his paper of 1944. His colleague, Donald Alexander Flanders, suggested the name *mollifiers*. Friedrichs himself acknowledged Sobolev's work on mollifiers stating that: "These mollifiers were introduced by Sobolev and the author". A special type of mollifier, which is equal to 1 in the area of interest and smoothly vanishes outside of a bigger set, we call a *bump function*.

There are many examples, where bump functions are used for the study of local properties of dynamical systems in \mathbb{R}^n . For instance, see [N] and [S4]. J. Palis in his work [P] considers bump functions in Banach spaces. He proves the existence of Lipschitz-continuous extensions of local maps with the help of Lipschitz-continuous bump functions. However, Z. Nitecki ([N]) points out that generally speaking, the smoothness of these extensions may not be higher than Lipschitz.

This is an obstacle in the local analysis of dynamical systems in infinite-dimensional spaces. The majority of infinite-dimensional Banach spaces do not have smooth bump functions. In the works [B], [B-R], [R] we discuss the conditions

However, Guntser was accused in the development of "abstract" science at the time when the USSR was desperate for an applied theory for the creation of atomic weapons. Guntser was forced to resign from his job.

Extension Of Mackeys Method To Banach Al:

An Extension of Mackey's Method to Banach *-Algebraic Bundles James Michael Gardner Fell, 1969 The main object of the present memoir is to show that the methods and results of Mackey 1958 and Blattner 1963 on the group extension representation problem go through without any essential change in the larger context of homogeneous Banach algebraic bundles with enough cross sections In order to dispense with separability we shall follow the topological methods of Blattner rather than Mackey's more detailed measure theoretic analysis Except for the last section Part II of this memoir is in fact a rewriting of much of Blattner's papers 1963 making the modifications necessary in the larger context of bundles The last Section 17 gives an account of the Mackey obstruction in the nonseparable case leading to an analogue Theorem 17.2 of Theorem 8.2 of Mackey's paper for homogeneous Banach algebraic bundles without separability restrictions This is the culminating point of the present memoir
