Extracellular Matrix Genes:

Extracellular Matrix Genes Charles Boyd, 2012-12-02 Extracellular Matrix Genes provides some of the interesting complexities of the structure of the entire family of extracellular matrix genes This book illustrates the permanent role that molecular biology and molecular genetics play in the detailed understanding of the normal biology of extracellular matrix Organized into 10 chapters this book begins with an overview of the structural and sequence aspects of the entire family of genomic sequences with a view to establishing common functional domains among collagens and their genes This text then examines the status of the literature concerning human types III and V Other chapters consider the FACIT collagen gene family This book discusses as well the development in understanding the structure of small proteoglycan core proteins and their role in proteoglycan biosynthesis and function as a result of their molecular cloning and expression The final chapter deals with mutations in collagen genes This book is a valuable resource for biochemists

The Extracellular Matrix in Genetic Skeletal Disorders Antonio Rossi, Frank Zaucke, 2024-11-10 This book explores how defects in extracellular matrix ECM proteins their post translational modifications and intracellular trafficking impact cartilage and bone integrity It underscores the ECM s role in providing structural support establishing morphogenetic gradients and interacting with cell surface receptors in musculoskeletal tissues The book delves into the structure and biology of the ECM in the skeleton discussing skeletal disorders caused by mutations in genes associated with ECM proteins synthesis turnover and signal transduction Authored by experts who have made significant discoveries in the molecular mechanisms of skeletal disorders and are developing therapeutic strategies this book is an invaluable research for both scientists and clinicians seeking a comprehensive understanding of this growing and exciting field The series Biology of Extracellular Matrix is published in collaboration with the American Society for Matrix Biology and the International Society for Matrix Biology

Cumulated Index Medicus ,1994 *Molecular Genetics and Emerging Therapies for Epithelial Ovarian Cancer: Basic Research and Clinical Perspectives* Stergios Boussios, Eleftherios Pierre Samartzis, Nicholas Pavlidis, J. Alejandro Perez-Fidalgo, 2023-11-06 Epithelial ovarian cancer EOC is the most lethal gynecological disorder due to a lack of effective early detection strategies Worldwide approximately 230 000 women are diagnosed annually whereas 150 000 die It represents the seventh most commonly diagnosed cancer among women in the world with 5 year survival rate of 46% More than one fifth of EOC have been related to hereditary conditions Considerable efforts have been made to implement screening of the general population to diagnose EOC early nevertheless this has been ineffective and there is no approved strategy Nowadays new approaches for early diagnosis and prevention based on molecular genomics are in development Whole genome sequencing has established the potency of the somatic genome characterised with diverse DNA repair deficiencies that can be used to stratify EOCs into distinct biological groups with predictive signatures of resistance or relapse The incorporation of next generation sequencing NGS into clinical practice remains challenging for two reasons Firstly the EOC risk is not clear for some of the included genes and secondly the variant of uncertain significance rates increase as more genes are analyzed Finally beyond germline pathogenic variants somatic mutations may also affect therapeutic choices and as such upfront tumor sequencing may be equally important to NGS particularly as we continue to challenge treatment paradigms in the first line management of EOC
