Extraction '90 W. Batey,1990 **Engineering Processes for Bioseparations** LAURENCE R.
WEATHERLEY,2013-10-22 The use of biotechnology in chemical synthesis offers up numerous advantages to the engineer in
the process industries but it also presents a number of fundamental challenges and difficulties which impinge directly on
separation process requirements The use of biochemical separations has grown significantly during the past decade and is
especially used in process industries such as healthcare and food processing However it is becoming increasingly more
important in areas such as recycling and waste water treatment and as industry shifts towards cleaner processes biochemical
separations will continue to grow The two main objectives of this book are to focus on the application of existing separation
process techniques to the recovery and purification of biologically derived products and to examine the state of knowledge of
new techniques which have future potential Within these objectives the complexities and breadth of problems associated with
biological separations are discussed specific engineering techniques are featured and their adaptation to biochemical
separations are highlighted **Symposium Series** Institution of Chemical Engineers (Great Britain),1990 Bibliographic
