The World's Dirtiest Machines Jennifer Blizin Gillis,2010-07-01 This book gives facts and figures on the dirtiest vehicles in the world from garbage barges to dump trucks **Innovation and Automation** Paul Satchell,2018-12-20 First published in 1998 this book links the forces of innovation and automation positively by shifting the focus on human machine interactions from the current technology centred approach to one where sharing is evolved and creativity is no longer suppressed It provides a unique way of understanding innovation in organisations by using an environmental interaction approach to understand creativity and its translation into innovatory behaviour The current dampening of creativity in organisations is made meaningful by explaining organisational behaviour in terms of rituals The author succinctly assembles the current evidence that the prevailing technology centred approach to automation is in part responsible for the inability of humans to be creative in work situations Many of the behavioural constraints necessary for this type of automation paralyse the translation of creativity into innovatory behaviour In producing an antidote to the technology centred approach he moves

beyond current human centred thinking to an approach where humans and machines share by using the same processes that underlie the sharing between humans This sharing centred approach to automation is explained and illustrated Throughout the book the current state of human machine interactions is illustrated with vignettes from aviation medicine and from organisations The book also discusses three pictures of future human machine interactions of the flightdeck in primary care medical practice and in boardrooms of major organisations The main readership includes all who are interested in innovation and organisational development especially in the technology based industries and services such as healthcare transportation manufacturing and information systems it provides essential new ideas for senior executives strategic consultants specialists in organisational behaviour and human resources members of regulatory agencies and other government facilities and academicians and researchers
