undergraduate students      **Bibliografia sobre Sensores Remotos** ,      A Selected Bibliography on Maps, Mapping, and Remote Testing ,1981      **Viewing the Earth** Pamela Etter Mack,1990 Viewing the Earth examines the role played by interest groups in shaping the process of technological change offering valuable insights into how technologies evolve It traces the history of Landsat from its origins through the launch and use of the first few satellites showing how a variety of forces shape the form and the eventual reception of any new technology The Landsat earth resources satellite system was a project of The National Aeronautics and Space Administration that was created to collect data about earth resources from space The first satellite was launched in 1972 with great fanfare and high expectations The data proved useful for everything from finding oil to predicting harvests yet today the successful commercialization of the program is still uncertain Why To answer this question Pamela E Mack focuses on the negotiating process that went on among different parts of the space agency other interested government agencies and various organizations that were potential users of the data This formal and informal negotiating process she points out involved not only choices between alternative technologies and the satellite but also conflicting definitions of what the satellite would do The story is full of fascinating detail from the concerns of the intelligence community over civilian satellites looking at the earth to the politics of agricultural survey Pamela E Mack is Associate Professor in the History Department at Clemson University      **Surveying and Mapping** ,1976      Concepts in Space Science R.R. Daniel,2002      NASA Reference Publication ,1977      Avalanche Risk Zones Sage Earthkeeper,AI,2025-02-26 Avalanche Risk Zones examines the complex interplay of terrain and climate to understand and mitigate avalanche risks It highlights how seemingly stable slopes can quickly become deadly due to specific conditions The book focuses on three key areas terrain analysis climate influence and risk assessment methodologies essential for identifying avalanche hazard zones The book explores how factors like slope angles and vegetation cover influence avalanche initiation connecting earth sciences and mountain geography It details how weather patterns impact snowpack bridging climatology and avalanche dynamics Did you know historical methods for predicting avalanches were often based on local weather patterns unlike today s reliance on detailed data and modeling This book uniquely integrates terrain and climate data for effective risk assessment Beginning with avalanche formation principles it progresses through terrain analysis climate influence and risk assessment culminating in practical case studies It s valuable for professionals in fields like forestry and emergency management as well as backcountry enthusiasts      **Principles of Applied Remote Sensing** Siamak Khorram,Cynthia F. van der Wiele, Frank H. Koch, Stacy A. C. Nelson, Matthew D. Potts,2016-01-04 This textbook is one of the first to explain the fundamentals and applications of remote sensing at both undergraduate and graduate levels Topics include definitions and a brief history of payloads and platforms data acquisition and specifications image processing techniques data integration and spatial modeling and a range of applications covering terrestrial atmospheric oceanographic and planetary disciplines The policy and law issues of remote sensing and the future trends on the horizon are also covered
