Energies is open to submissions for a Special Issue on Renewable Energy Production from Energy Crops and Agricultural Residues Biomass represents an important source of renewable and sustainable energy production Its increasing consumption is mainly related to the increase in global energy demand and fossil fuel prices but also to a lower environmental impact compared to non renewable fuels These factors take RED II directives into consideration In the past forestry interventions were the main supply source of biomass but in recent decades two others sources have entered the international scene These are dedicated energy crops and agricultural residues which are important sources of biomass for biofuel and bioenergy Below we consider four main value chains Oil crops Oil production from non food oilseed crops such as camelina Crambe safflower castor cuphea cardoon etc oil extraction and oil utilization for fuel production Lignocellulosic crops Biomass production from perennial grasses miscanthus giant reed switchgrass reed canary grass etc woody crops willow poplar Robinia eucalyptus etc and agricultural residues pruning maize cob maize stalks wheat chaff sugar cane straw etc considering two main transformation systems 1 Electricity heat production 2 Second generation ethanol production Carbohydrate crops cereals sweet sorghum sugar beets sugar cane etc for ethanol production Fermentable crops maize barley triticale Sudan grass sorghum etc and agricultural residues chaff maize stalks and cob fruit and vegetable waste etc for production of biogas and or biomethane *Attainment of SDGs through the Advancement in Solar PV systems* Praveen Kumar Balachandran,Sudhakar Babu Thanikanti,Bamidele Victor Ayodele,Murat Fahrioglu ,Nnamdi Nwulu,2024-11-15

With less than a decade until we reach 2030 it is crucial to address the deep inequalities affecting not only our health but also our quality of life and the economy of countries worldwide Few of the UN s Sustainable Development Goals SDGs can be directly and indirectly achieved through the implementation of renewable energy systems with a significant role being played by solar photovoltaic PV systems Solar PV systems are considered one of the most efficient methods of providing clean electrical energy which is vital to attaining these goals Numerous researchers across the globe are currently focusing on improving efficiency reducing costs recycling reconfiguring and developing materials for solar PV systems By utilizing renewable energy systems for daily needs such as power generation agriculture EV charging among others we can contribute to effectively achieving the SDGs However it is essential to assess and highlight the level of attainment of SDGs in ongoing research of solar PV systems This topic aims to provide a comprehensive analysis of the goals and bridge the gap between research and the aim of research in SDGs **ADDRESSING GLOBAL ISSUES WITH COLLECTIVE AND CONCERTED ACTIONS: Indonesian Scholar Perspectives for the G20 Forum** Wahyudi Kumorotomo,Muhammad Baiquni,2023-01-12

Green, Reliable and Viable: Perspectives on India's Shift Towards Low-Carbon Energy Ajay Mathur,Adair Turner,Noémie Leprince-Ringuet,2019-06-03 Resource intensive practices of yesterday can no longer sustain the world The future of our planet hinges on timely transitions to efficiency of resource use across ecosystems of people products and processes This will happen through transitions to low carbon global energy systems Against this it is vital to take a closer look at the ongoing transitions in India India is a country faced with the triple challenges of raising a substantial amount of its population out of poverty shifting to a low carbon economy and fighting climate change It is unquestionable that India s energy demand and consumption will only continue to rise in the decades to come nonetheless with multiple synchronized steps in the right direction India can set the wheel in motion to achieve its development goals while containing its carbon footprint This book brings together the valued perspectives from key stakeholders in these transitions Experts and practitioners from the mobility clean energy agriculture and energy efficiency sectors among others have shared their outlook on challenges that lie in the way of energy transitions

in India and offered solutions and next steps to move the country forward on the decarbonisation pathway The overarching message is clear the Indian energy sector of the future will be noticeably different from what it is today Please note This book is co published with TERI Press India Taylor Francis does not sell or distribute the Hardback in India Pakistan Nepal Bhutan Bangladesh and Sri Lanka **Renewable Energy Law** Penelope Crossley,2019-11-28 Provides the first scholarly and

comprehensive book on the national renewable energy laws of every country that has them 113 countries Nuclear Power Pavel Tsvetkov,2010-08-17 The world of the twenty first century is an energy consuming society Due to increasing population and living standards each year the world requires more energy and new efficient systems for delivering it Furthermore the new systems must be inherently safe and environmentally benign These realities of today s world are among the reasons that lead to serious interest in deploying nuclear power as a sustainable energy source Today s nuclear reactors are safe and highly efficient energy systems that offer electricity and a multitude of co generation energy products ranging from potable water to heat for industrial applications The goal of the book is to show the current state of the art in the covered technical areas as well as to demonstrate how general engineering principles and methods can be applied to nuclear power systems

Energy Research Abstracts ,1995 Our Renewable Energy Future: The Remarkable Story Of How Renewable Energy Will Become The Basis For Our Lives Douglas Arent,2024-05-24 Our Renewable Energy Future delves into the clean energy technology evolution and where our energy system is going While the book s foundation is technology innovation it brings a unique perspective that technology alone is not what has brought about the explosive growth of renewable energy and offers fresh insights into how technology economics social dynamics policy and geopolitics are forces affecting our energy future This book is a culmination of Dr Arent s lifelong passion for energy sustainable development and renewable energy technology It covers the journey of evolving technology economics political economy and geopolitics of clean energy over the last 40 years and provides insights for the coming decades From a technology perspective the book traces the arc of recent innovations and synthesizes innovations across multiple interacting perspectives into a description of Our Renewable Energy Future *Stuck in Transition* Mirlan Aldayarov,Istvan Dobozi,Thomas Nikolakakis,2017-02-27 The large scale transformation of Kazakhstan s power sector following independence in 1991 was reflected by the country s move toward liberalizing the market and implementing sector regulation As an early adopter of a liberalized multimarket model consisting of bilateral spot balancing ancillary and capacity submarkets Kazakhstan s power sector was regarded a market reform leader among countries of the former Soviet Union having achieved a much improved supply and demand balance and service quality However despite the noteworthy headway sector reforms remain predominantly as unfinished business The excess generation capacity that was inherited from the former Soviet Union at a time when the energy only market prices were too low to attract serious investors has masked the need to reflect on the long term outlook of the country s power production As the investment crunch unfolded in the mid 2000s a diverging concern almost immediately arose that is the

capacity additions of existing and planned generations may not be sufficient to keep pace with the perpetuating and significant increase in the demand for power. Instead of applying market mechanisms to allow prices to rise and reflect the underlying supply and demand gap, the GoK addressed the issue by implementing administrative command and control measures. This study draws on the World Bank's long-standing engagement in Kazakhstan's energy sector and a number of recent technical assistance and advisory support activities. The study aims to i) objectively identify the principal challenges faced by the Kazakhstan power sector in its ongoing transition and outlining potential policy options and ii) draw lessons from Kazakhstan's experience in sector reforms for the broader international audience. The study covers broader sector issues including long-term least cost power system planning, supply and demand balancing, tariff setting, market structure, and integration of renewable energy.

Regulatory Choices Richard J. Gilbert, 2023-11-15. *Regulatory Choices* offers the first comprehensive economic history of energy policy and its consequences for California, where some of the most innovative and far-ranging programs of regulatory reform have originated. The authors of this volume have gathered together an impressive wealth of material about actual policy decisions and their repercussions and have subjected their findings to astute economic analysis. This book will serve for years to come as an invaluable reference on the costs and effects of various energy policies. With its focus on bringing prices in alignment with the true cost of producing power and delivering it to the customer, the first part of the book outlines the issue of setting utility rates and considers some of the proposals to provide regulated industries with incentives to respond to economic and environmental concerns. The problems of energy supply occupy the second part of the book, which includes a survey of the costs of alternative energy sources and estimates of their environmental impacts, as well as a case study of the construction of the Diablo Canyon nuclear power plant. The book concludes by documenting the results of subsidy programs that were designed to target the development of wind power and residential energy conservation. Regulators we learn, have a mixed record when it comes to managing the production of energy. Some conservation programs have enjoyed considerable economic success, particularly those that correct a lack of consumer information. Others, such as the renewable energy tax credits or programs designed to subsidize new technologies, have cost much more than the value of the energy they have saved. What emerges clearly from this study is that regulated industries are not immune from the forces of competition. This title is part of UC Press's *Voices Revived* program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, *Voices Revived* makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1991. **Annual Report** IEA Coal Research, 2000. *Human-Centred Technology Management for a Sustainable Future* Ricardo Zimmermann, José Coelho Rodrigues, Ana Simoes, Gustavo Dalmarco, 2025-03-26. This proceedings volume contains selected papers from the 33rd International Association for Management of Technology (IAMOT) Conference held from July 8-11, 2024, in Porto, Portugal.

It is the second volume of a three volume set of conference proceedings focused on technologies for a sustainable future. The book explores the challenges and opportunities in today's social and business landscapes delving into innovative and disruptive concepts. With a special emphasis on the role of technologies it sheds light on how they enable novel approaches to address current issues. The volume demonstrates that following the principles of Industry 5.0 technologies can go far beyond productivity and economic gains contributing to the benefit and comfort of human workers. It also elucidates the necessity of adopting a human centered approach in utilizing technology to adapt production processes to workers' needs while ensuring that the implementation of new technologies does not infringe upon the fundamental rights of workers. *Economic Growth*

And Development (Third Edition) Hendrik Van Den Berg, 2016-09-02. This textbook covers the full range of topics and issues normally included in a course on economic growth and development. Both mainstream economic perspectives as well as the multi-paradigmatic, interdisciplinary and dynamic evolutionary perspectives from heterodox economics are detailed. Economic development is viewed in terms of the long run well-being of humanity, social stability, environmental sustainability and just distribution of economic gains, not simply as the growth of GDP. Furthermore, this textbook explicitly recognizes the complexity of economic development by linking economic activity to our broader social and natural environments. The textbook's unique feature is its focus on the natural environment. Both the historical effects of economic development on the environment and the environmental constraints on future economic development are thoroughly discussed in two chapters on environmental issues and policies. In fact, because economic development is defined in terms of economic, social and environmental sustainability, the natural environment is included in discussions throughout the book. The textbook is interdisciplinary; knowledge from fields such as sociology, psychology, political science, economic history and ecology is called on to enhance the economic analysis. A thorough historical account of the development of the principal paradigms of economic development is also included, and the important issues of institutional development and cultural change merit their own chapters. Two chapters on technological change holistically focus on production technologies as well as the dynamic performance of entire economic, social and ecological systems. Also, the important relationship between economic development and globalization is presented in three chapters on international trade, international finance and investment and immigration from both orthodox and heterodox perspectives. **Handbook of Energy Law in the Low-Carbon Transition**

Giuseppe Bellantuono, Lee Godden, Hanri Mostert, Hannah Wiseman, Hao Zhang, 2023-05-22. The low carbon transition is ongoing everywhere. This Handbook, written by a group of senior and junior scholars from six continents and nineteen countries, explores the legal pathways of decarbonisation in the energy sector. What emerges is a composite picture. There are many roadblocks but also a lot of legal innovation. The volume distils the legal knowledge which should help move forward the transition. Questions addressed include the differences between the decarbonization strategies of developed and developing countries, the pace of the transition, the management of multi-level governance systems, the pros and cons of

different policy instruments the planning of low carbon infrastructures the roles and meanings of energy justice The Handbook can be drawn upon by legal scholars to compare decarbonisation pathways in several jurisdictions Non legal scholars can find information to be included in transition theories and decarbonization scenarios Policymakers can discover contextual factors that should be taken into account when deciding how to support the transition **Transatlantic**

Perspectives, 1993 *South Africa's Energy Transition* Tobias Bischof-Niemz, Terence Creamer, 2018-07-11 South Africa's energy transition has become a highly topical emotive and politically contentious topic Taking a systems perspective this book offers an evidence based roadmap for such a transition and debunks many of the myths raised about the risks of a renewable energy led electricity mix Owing to its formidable solar and wind resources South Africa has an almost unparalleled opportunity to turn solar photovoltaic and onshore wind generators into the country's power generation workhorses a role hitherto played by coal This book shows that a renewables led mix will not only provide the lowest cost but will also create more jobs than any of the alternatives currently under consideration In addition it offers a glimpse of how South Africa's low cost and decarbonised electricity system can power a competitive industrial economy an electric mobility revolution and in the long run create new export opportunities This book will be of great interest to energy industry practitioners as well as students and scholars of energy policy and politics environmental economics and sustainable development **Renewable Energy Sources and Climate Change Mitigation** Ottmar Edenhofer, Ramón

Hardisty, 2010-06-21 Never before has the quest to balance the needs of people the environment and the economy been so important While sustainability has been widely taken up by governments and business the world has continued to move in increasingly unsustainable directions from continued dependence on fossil energy to rising greenhouse gas emissions and erosion
