changes in the Earth's atmosphere and geosphere that have been observed during periods of extraterrestrial changes such as solar eclipses or solar storms. The author goes on to suggest possible mechanisms for anomalies seen in climate change and other environmental effects through a deep examination of interdisciplinary research. Core topics covered in the work include data from ground-based detectors and from the Solar and Heliospheric Observatory (SOHO) satellite which monitor solar activity. Key variables associated with sunspot eruption such as electron flux, proton flux, X-ray flux and planetary indices. Observable changes in other planets and their moons as well as in cosmic radiation from beyond the sun. Extraterrestrial effects on the Earth's magnetic field and on seismic activity. With its fresh and multidisciplinary approach, *Extraterrestrial Remote Sensing and Climate Change* is a thought-provoking treatise for students, researchers and professionals in the fields of environmental science and climate science.
