Eye Of The Comet:

Eye of the Comet Pamela Sargent, 2014-04-01 Young Lydee had always known this strange comet world to be Home She had always felt the presence and control of the omnipresent Homesmind an intelligence force that guides the fate of her world and the people in it Struggling with her future Lydee discovers the destiny she is meant for the fate she will fulfill within her community And it frightens her She will act as a bridge between her comet Home and her species native Earth She is disgusted by her primitive ancestors on that planet but knows that she now has a mission in life to complete But will the Earthlings welcome her Or is this a journey through grave danger Lydee hopes that she will live to fulfill her destiny

Solar System Thomas Hockey, Jennifer Lynn Bartlett, Daniel C. Boice, 2021-08-12 Combining the latest astronomical results with a historical perspective *Solar System Between Fire and Ice* takes you on a fabulous tour of our intriguing Solar System Not content with a conventional discourse restricted to the major and minor bodies astronomers Hockey Bartlett and Boice venture beyond the limits of our system to look at exoplanets and to consider future trends in space exploration and tourism They discuss not only what scientists know about planets asteroids and comets but how the discoveries were made With extensive teaching experience their accessible prose clearly explains essential physical concepts Lavishly illustrated as well as carefully researched *Solar System Between Fire and Ice* delights the eyes as well as feeding the mind Detailed appendices provide additional technical data and resources for your own on line voyage of discovery Whether you are an educated layperson student teacher amateur astronomer or merely curious you will come away having learned the most up to date knowledge and enjoyed the process The authors bring a unique perspective to this subject combining their years of experience in research teaching and history of planetary science Prof Thomas Hockey is a professor of astronomy specializing in planetary science and the history of science Dr Jennifer Bartlett is an astronomer with a forte in dynamical motions of asteroids with liberal arts teaching experience Dr Daniel Boice is an active research astronomer in planetary science especially comets with considerable teaching experience In the 1980s and 90s the Viking and Voyager missions provided droves of exciting information generating a new level of public interest Textbooks were rewritten and scientists worked to understand the data during mission poor period that followed In recent times however we have entered a new era There has been a multinational effort to expand our knowledge of the Solar System Data from these missions has been freely shared and has again raised the level of public interest Within this era of renewed interest it is appropriate as is done in this book to provide the public with an effort to present an integrated view of our Solar System and questions that the discovery of extrasolar planets have raised with regard to the Solar System as a whole Professor Reta Beebe recipient of NASA s Exceptional Public Service Medal I understand this book to be aimed at a general audience but I can also see its use as a text in astronomy classes especially in a community school or situations where students typically resist reading the textbook The writing is light and entertaining and will engage students yet it thoroughly covers all the basic concepts of a typical Astro 101 class Dr Katy Garmany winner of the American Astronomical Society s Annie J Cannon Award *Astronomy: The Science of the Heavenly Bodies* David P. Kronk, Maik Meyer, 2023-05-09 This catalog is the first in depth investigation of comets that were reported since the 17th century but not confirmed and

subsequently lost Volume I of this two volume work covers objects observed between 1600 and 1899 a period that was dominated by visual observations and was experiencing a rapid evolution in science The book uniquely combines the history and culture of comet hunting and discovery with modern tools of orbital mechanics to present a wholesome catalog of unconfirmed and suspected comets Each case includes a presentation of the observations a discussion about the observer when possible consideration of the historic context and a conclusion as to the nature of the object In most cases the book presents material from original sources including some never before published that were acquired from observatories libraries and historical societies around the world Although some of these unconfirmed comets turned out to be misidentifications of planets or star clusters fabrications or poor observations of comets that were already being observed the Authors did identify many objects that were likely real comets In some cases the Authors were even able to derive orbits for the first time These observations may be valuable in the future as they could prove to be observations of periodic comets still to be discovered English Mechanic and Mirror of Science ,1912 Cometography: Volume 2, 1800-1899 Gary W. Kronk,1999 Cometography is a four volume catalog of every comet observed throughout history Volume II provides a complete discussion of every comet seen during the nineteenth century Cometography uses the most reliable orbits known to determine the distances from the Earth and Sun at the time a comet was discovered and last observed as well as the largest and smallest angular distance to the Sun most northerly and southerly declination closest distance to the Earth and other details to enable the reader to understand the physical appearance of each well observed comet The book also provides non technical details to help the reader better appreciate how the comet may have influenced various cultures at the time of its appearance Cometography will be valuable to historians of science as well as providing amateur and professional astronomers with a definitive reference on comets through the ages
