

EZ Reader

Microhematocrit Reader

for 40mm and 75mm capillary tubes

TO USE:

1. Place centrifuged tube in slot with interface of sealant and packed red cells intersecting the '0%' line.
2. Slide the tube holder until the top of the plasma layer intersects the '100%' line.
3. Read the percentage height of the packed red cell column from the scale.

Lines are in 2% increments, therefore estimate to the nearest 1%.

For in vitro diagnostic use.

Psychology of Reading Keith Rayner, Alexander Pollatsek, Jane Ashby, Charles Clifton Jr., 2012-05-22 Reading is a highly complex skill that is prerequisite to success in many societies in which a great deal of information is communicated in written form. Since the 1970s much has been learned about the reading process from research by cognitive psychologists. This book summarizes that important work and puts it into a coherent framework. The book's central theme is how readers go about extracting information from the printed page and comprehending the text. Like its predecessor, this thoroughly updated 2nd Edition encompasses all aspects of the psychology of reading with chapters on writing systems, word recognition, the work of the eyes during reading, inner speech, sentence processing, discourse processing, learning to read, dyslexia, individual differences, and speed reading. *Psychology of Reading* 2nd Edition is essential reading for undergraduates, graduates, and researchers in cognitive psychology and could be used as a core textbook on courses on the psychology of reading and related topics. In addition, the clear writing style makes the book accessible to people without a background in psychology but who have a personal or professional interest in the process of reading.

Cognitively Inspired Natural Language Processing Abhijit Mishra, Pushpak Bhattacharyya, 2018-08-01 This book shows ways of augmenting the capabilities of Natural Language Processing (NLP) systems by means of cognitive model language processing. The authors employ eye tracking technology to record and analyze shallow cognitive information in the form of gaze patterns of readers/annotators who perform language processing tasks. The insights gained from such measures are subsequently translated into systems that help us: 1) assess the actual cognitive load in text annotation with resulting increase in human text annotation efficiency and 2) extract cognitive features that when added to traditional features can improve the accuracy of text classifiers. In sum, the authors' work successfully demonstrates that cognitive information gleaned from human eye movement data can benefit modern NLP. Currently available Natural Language Processing (NLP) systems are weak AI systems; they seek to capture the functionality of human language processing without worrying about how this processing is realized in human beings' hardware. In other words, these systems are oblivious to the actual cognitive processes involved in human language processing. This ignorance, however, is NOT bliss. The accuracy figures of all non-toy NLP systems saturate beyond a certain point, making it abundantly clear that something different should be done.

The Science of Reading Margaret J. Snowling, Charles Hulme, 2013-04-22 *The Science of Reading: A Handbook* brings together state-of-the-art reviews of reading research from leading names in the field to create a highly authoritative multidisciplinary overview of contemporary knowledge about reading and related skills.
