**To Adam About Adam** Jim Frederick,2013-10-16 Modern scientific discoveries often challenge biblical teachings and the long held beliefs of many Christians To Adam about Adam is a serious yet lighthearted autobiography of the author who has known Jesus since his childhood but drifted for many years while on his quest for science Only while searching for answers to his sons question about Creation did the author find his way back to the Word of God Through his journey the author was able to bring his passion for science and love for God together into a more holistic understanding of Gods plan for mankind In a very personal way he uses an open bantering approach throughout the book to establish a friendly relationship with the reader This personal relationship is used to guide the reader through a number of biblical stories to show how God acted as both a loving and caring Father and as a scientist in teaching mankind lessons related to overcoming sin To Adam about Adam may improve the readers understanding of Gods plan for mankind and show how science is instrumental to that plan For example the author details how the fall of Adam and Eve was an important and preconceived part of Gods plan not merely perfection gone awry Science can explain the basis for the sin we see in the world today whereas the Bible describes the only cure Thus the Bible and science are both integral to the fulfillment of Gods plan **Medical Times** ,1845

**The Quest for Food** Harald Brüssow, 2007-06-01 When you go into a scientific library or look through the catalogues of scientific publishers you will quickly find books from food scientists food technologists food chemists food microbiologists and food toxicologists Agronomists nutritionists and physicians have written on food and last but not least cooks What I missed was a book on food written from the perspective of a biologist When Susan Safren the food science editor from Springer Science Business Media LLC invited me to write a book I decided that I would write this book on food biology What I had in mind was a survey on eating through space and time in a very fundamental way but not in the format of a systematic textbook The present book is more of an ordered collection of scientific essays Contents In Chapter 1 I start with a prehistoric Venus to explore the relationship between sex and food Then I use another lady Europe to investigate the strong links between food and culture I then ask what is eating in a very basic but simple physicochemical sense In Chapters 2 and 3 I embark on a biochemistry oriented travel following the path of a food molecule through the central carbon pathway until it is decomposed into CO and H<sub>2</sub>O and a lot of ATP My account does not intend to teach biochemistry but to use recent research articles from major scientific journals to look behind food biochemistry
