Venema,2017-01-31 Genomic science indicates that humans descend not from an individual pair but from a large population What does this mean for the basic claim of many Christians that humans descend from Adam and Eve Leading evangelical geneticist Dennis Venema and popular New Testament scholar Scot McKnight combine their expertise to offer informed guidance and answers to questions pertaining to evolution genomic science and the historical Adam Some of the questions they explore include Is there credible evidence for evolution Do we descend from a population or are we the offspring of Adam and Eve Does taking the Bible seriously mean rejecting recent genomic science How do Genesis s creation stories reflect their ancient Near Eastern context and how did Judaism understand the Adam and Eve of Genesis Doesn t Paul s use of Adam in the New Testament prove that Adam was a historical individual The authors address up to date genomics data with expert commentary from both genetic and theological perspectives showing that genome research and Scripture are not irreconcilable Foreword by Tremper Longman III and afterword by Daniel Harrell     The Colonisation of Land Colin Little,1983-12-15 The book traces the ways in which terrestrial animals have evolved from aquatic ancestors and discusses the means by which they are adapted to life on land The most important physiological adaptations are those involving salt and water balance the excretion of nitrogen reproductive mechanisms and the sense organ and these are given priority Evidence from fossil history is combined with that from the ecology and physiology of present day species to assess the probable routes along which various evolutionary lines had moved on to land Individual chapters are concerned with specific animal groups and emphasis is placed on comparisons of physiological mechanisms between closely related animals before attempting wider generalisations The book closes with a brief account of the recolonisation of the sea and fresh waters by terrestrial animals     **March Onto Land** Thom Holmes,2008 Explores early prehistoric life from the Silurian period through the Middle Triassic epoch including tetrapods amphibians reptiles and land plants     *A New History of Life* Peter Ward,Joe

Kirschvink, 2015-01-01 Charles Darwin's theories first published more than 150 years ago still set the paradigm of how we understand the evolution of life but scientific advances of recent decades have radically altered that. Now two pioneering scientists draw on their years of experience in paleontology, biology, chemistry, and astrobiology to deliver an eye-opening narrative using a generation's worth of insights culled from new research. Writing with zest, humor, and clarity, Ward and Kirschvink show that many of our long-held beliefs about the history of life are wrong. Three central themes emerge. First, Ward and Kirschvink argue that catastrophe shaped life's history more than all other forces combined from notorious events like the sudden extinction of dinosaurs to the recently discovered Snowball Earth and the Great Oxygenation Event. Second, life consists of carbon, but oxygen, carbon dioxide, and hydrogen sulfide determined how it evolved. Third, ever since Darwin we have thought of evolution in terms of species. Yet it is the evolution of ecosystems from deep ocean vents to rainforests that has formed the living world as we know it. Ward and Kirschvink tell a story of life on Earth that is at once fabulous and familiar. And in a provocative coda, they assemble discoveries from the latest cutting-edge research to imagine how the history of life might unfold deep into the future.
