*Speculations* Paul J. Ennis, 2020 From the Editorial Introduction Since I am convinced that nobody reads editorials I will keep my remarks brief Putting together the inaugural issue of *Speculations* has been an unusual experience It has depended on the collusion of fellow speculative types the help of many anonymous reviewers the endless patience of designer Thomas Gokey and more hours than someone in the final year of their PhD should ever spend on a project Looking over the final product I think it has all been worth it This is the first journal dedicated to speculative realism and despite the obscurity of that term I think we all understand it as a handy label under which weird realists continental metaphysicians object oriented ontologists transcendental realists vitalists and Lovecraftians can unite This is also perhaps the first time a journal can boast that each contributor is also a blogger This is the reason why *Speculations* could only ever be an online open access journal

**Ecological Urbanism: The Nature of the City** Susannah Hagan, 2014-09-15 *Ecological Urbanism: The Nature of the City* asks the questions that are important inside and outside the built environment professions what are climate change urbanisation and ecology doing to the theory and practice of urban design How does Ecological Urbanism figure in this change What is Ecological Urbanism In answer this book is neither

definitive impossible when a subject is still in motion nor encyclopaedic equally impossible when so much has been written on almost every aspect of these essays Instead it seeks to rebalance the ecological narrative and its embryonic modes of practice with the narratives of urbanism and its older deeply embedded modes of practice It examines the implications for cities and the designers of cities now we are required to again address their metabolic as well as social and formal dimensions and it explores the extent to which environmental engineering and natural systems design can and should become drivers for the remaking of cities in the 21st century Above all it argues that sooner rather than later urbanism needs to become environmentally literate and environmental design needs to become culturally literate      **Social and**

fields of study political ecology and ecological economics whilst also investigating the relations between them The book analyses several manifestations of the growing environmental justice movement and also of popular environmentalism and the environmentalism of the poor which will be seen in the coming decades as driving forces in the process to achieve an ecologically sustainable society The author studies in detail many ecological distribution conflicts in history and at present in urban and rural settings showing how poor people often favour resource conservation The environment is thus not so much a luxury of the rich as a necessity of the poor It concludes with the fundamental questions who has the right to impose a language of valuation and who has the power to simplify complexity Joan Martinez Alier combines the study of ecological conflicts and the study of environmental valuation in a totally original approach that will appeal to a wide cross section of academics ecologists and environmentalists
