Oceanographic Unit,1965 Five oceanographic surveys were conducted in the vicinity of the Grand Banks of Newfoundland in support of International Ice Patrol operations in 1964. Measurements of temperature and salinity obtained from serial Nansen observations were used to determine the dynamic topography, a principal factor in studying the most probable drift of icebergs endangering shipping in this area. Later analysis of selected oceanographic sections was accomplished to calculate the volume flow and heat transport through these sections. An additional survey covered the area adjacent to Cape Bonaville Newfoundland and a section between South Wolf Island, Labrador and Cape Farewell, Greenland. Analyses for dissolved oxygen and nutrients were made on sea water samples from the latter section. Preliminary studies of iceberg deterioration and specific drift factors were conducted.
