Jansen, 2013-03-09 The global environment is changing rapidly under the impact of human activities and an important element of this change is related to global climate modification. Can the study of climate and history help in devising strategies for coping with this change? What might be the type of information most useful in this context? What are the pitfalls awaiting the unwary? These are the kinds of questions that led us to bring together experts from the natural and social sciences with a strong interest in history to promote discussion between workers in different disciplines by focussing on a common topic of great interest to society. The meeting was arranged in the framework of a Hanse Conference within the interdisciplinary program of the Hanse Wissenschaftskolleg, a foundation set up to promote interdisciplinary studies in collaboration between the universities of Bremen and Oldenburg. The aim of the Hanse Conferences in general is to provide opportunities for experts from different fields of the sciences and humanities to come together and explore the larger framework of topics of common interest. What unites the participants is their desire to look over the fence to neighboring disciplines. Young colleagues who wish to build an interdisciplinary career are particularly welcome. In the Hanse Conference on Climate and History we have endeavoured to build bridges between the climate sciences and the sociological sciences concerned with environmental impacts on human activities. The geological sciences we felt are especially well suited to the purpose because they already comprise historical aspects. Fishery Management Plan for Coral Reef Ecosystems of the

Naiman, 2012-02-02 The symposium Pacific Salmon and Their Ecosystems: Status and Future Options and this book resulted from initial efforts in 1992 by Robert J. Naiman and Deanna J. Stouder to examine the problem of declining Pacific salmon *Oncorhynchus* spp. Our primary goal was to determine informational gaps. As we explored different scientific sources, state, provincial, and federal agencies as well as non-profit and fishing organizations, we found that the information existed but was not being communicated across institutional and organizational boundaries. At this juncture we decided to create a steering committee and plan a symposium to bring together researchers, managers, and resource users. The steering committee

consisted of members from state and federal agencies non profit organizations and private industry see Acknowledgments for names and affiliations In February 1993 we met at the University of Washington in Seattle to begin planning the symposium The steering committee spent the next four months developing the conceptual framework for the symposium and the subsequent book Our objectives were to accomplish the following 1 assess changes in anadromous Pacific Northwest salmonid populations 2 examine factors responsible for those changes and 3 identify options available to society to restore Pacific salmon in the Northwest The symposium on Pacific Salmon was held in Seattle Washington January 10 12 1994 Four hundred and thirty five people listened to oral presentations and examined more than forty posters over two and a half days We made a deliberate attempt to draw in speakers and attendees from outside the Pacific Northwest *Book catalog of the Library and Information Services Division* Environmental Science Information Center.
