Extinction A Scientific American:

De-Extinction Rebecca E. Hirsch, 2017-01-01 In the twenty first century because of climate change and other human activities many animal species have become extinct and many others are at risk of extinction Once they are gone we cannot bring them back or can we With techniques such as cloning scientists want to reverse extinction and return lost species to the wild Some scientists want to create clones of recently extinct animals while others want to make new hybrid animals Many people are opposed to de extinction Some critics say that the work diverts attention from efforts to save species that are endangered Others say that de extinction amounts to scientists playing God Explore the pros and cons of de extinction and the cutting edge science that makes it possible The Scientific American Brave New Brain Judith Horstman, Scientific American, 2010-02-25 This fascinating and highly accessible book presents fantastic but totally feasible projections of what your brain may be capable of in the near future It shows how scientific breakthroughs and amazing research are turning science fiction into science fact In this brave new book you ll explore How partnerships between biological sciences and technology are helping the deaf hear the blind see and the paralyzed communicate How our brains can repair and improve themselves erase traumatic memories How we can stay mentally alert longer and how we may be able to halt or even reverse Alzheimers How we can control technology with brain waves including prosthetic devices machinery computers and even spaceships or clones Insights into how science may cure fatal diseases and improve our intellectual and physical productivity Judith Horstman presents a highly informative and entertaining look at the future of your brain based on articles from Scientific American and Scientific American Mind magazines and the work of today s visionary neuroscientists **Effects of Past Global Change on Life** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Panel on Effects of Past Global Change on Life, 1995-02-01 What can we expect as global change progresses Will there be thresholds that trigger sudden shifts in environmental conditions or that cause catastrophic destruction of life Effects of Past Global Change on Life explores what earth scientists are learning about the impact of large scale environmental changes on ancient life and how these findings may help us resolve today s environmental controversies Leading authorities discuss historical climate trends and what can be learned from the mass extinctions and other critical periods about the rise and fall of plant and animal species in response to global change The volume develops a picture of how environmental change has closed some evolutionary doors while opening others including profound effects on the early members of the human family An expert panel offers specific recommendations on expanding research and improving investigative tools and targets historical periods and geological and biological patterns with the most promise of shedding light on future developments This readable and informative book will be of special interest to professionals in the earth sciences and the environmental community as well as concerned policymakers Effects of Past Global Change on Life Panel on Effects of Past Global Change on Life, Commission on Geosciences, Environment and Resources, Division on Earth

Division of Bibliography, 1919 Planetary Overload Anthony J. McMichael, 1993-10-07 The human species faces many threats to its health perhaps to its survival Taking an interesting perspective Planetary Overload forcefully points out the consequences to human health of ongoing degradation of Earth's ecosystems In a broad based accessible analysis A J McMichael examines ecological disruptions land degradation ozone depletion temperature increases and loss of genetic diversity through the extinction of species among others and compellingly demonstrates their potentially disastrous results including food shortages new and intensified disease patterns rising seas mass refugee problems and cancers blindness and immune suppression from increased ultraviolet radiation While other books on the subject analyse only the environmental impact of these problems McMichael relates each of these insidious processes back to its ultimate impact on human health He thoroughly considers these problems within a broad evolutionary biological social and economic context and also explores the underlying problems contributing to environmental breakdown especially the relations between the world's rich and poor This book will be of interest to environmentalists public health professionals policy makers environmental studies and human ecology scholars and anyone wishing a lucid rational assessment of today's pressing ecological concerns *Recovering Lost Species in the Modern Age* Dolly Jorgensen, 2019-10-29 A groundbreaking study of how emotions motivate attempts to counter species loss This groundbreaking book brings together environmental history and the history of emotions to examine the motivations behind species conservation actions In *Recovering Lost Species in the Modern Age* Dolly Jorgensen uses the environmental histories of reintroduction rewilding and resurrection to view the modern conservation paradigm of the recovery of nature as an emotionally charged practice Jorgensen argues that the recovery of nature identifying that something is lost and then going out to find it and bring it back is a nostalgic practice that looks to a historical past and relies on the concept of belonging to justify future oriented action The recovery impulse depends on emotional responses to what is

lost particularly a longing for recovery that manifests itself in such emotions as guilt hope fear and grief J rgensen explains why emotional frameworks matter deeply both for how people understand nature theoretically and how they interact with it physically The identification of what belongs the lost nature and our longing the emotional attachment to it in the present will affect how environmental restoration practices are carried out in the future A sustainable future will depend on questioning how and why belonging and longing factor into the choices we make about what to recover The Doomsday Book Marshall Brain,2021-08-03 How might the world as we know it end In this illustrated guide How Stuff Works author Marshall Brain explores myriad doomsday scenarios and the science behind them What if the unimaginable happens A nuclear bomb detonates over a major city for example or a deadly virus infects millions around the world There are other disasters we don t even have to imagine because they ve already occurred like violent hurricanes or cataclysmic tsunamis that have caused horrific loss of life and damage In The Doomsday Book Marshall Brain explains how everything finally ends the decimation of nations and cities of civilization of humanity of all life on Earth Brain takes a deep dive into a wide range of doomsday narratives including manmade events such as an electromagnetic pulse attack a deadly pandemic and nuclear warfare devastating natural phenomena such as an eruption from a super volcano the collapse of the Gulf Stream or lethal solar flares and science fiction scenarios where robots take over or aliens invade Each compelling chapter provides a detailed description of the situation the science behind it and ways to prevent or prepare for its occurrence With fun graphics and eye catching photographs at every turn The Doomsday Book will be the last book you ll ever have to read about the last days on Earth Scenarios include Asteroid Strike a massive asteroid could obliterate life just as it might have killed the dinosaurs Gray Goo self replicating nanobots engulf the planet Grid Attack an attack on our power grid shuts down the internet affecting airports banks computers food delivery medical devices and the entire economic system Gulf Stream collapse the shutdown of this important ocean current causes temperatures to plummet Ocean acidification if the oceans pH levels shift due to a rise in carbon dioxide all marine life could die *Mass Extinctions and Their Aftermath* ,1997-09-11 Why do mass extinctions occur The demise of the dinosaurs has been discussed exhaustively but has never been out into the context of other extinction events This is the first systematic review of the mass extinctions of all organisms plant and animal terrestrial and marine that have occurred in the history of life This includes the major crisis 250 million years ago which nearly wiped out all life on Earth By examining current paleontological geological and sedimentological evidence of environmental changes the cases for explanations based on climate change marine regressions asteroid or comet impact anoxia and volcanic eruptions are all critically evaluated **Fear and Nature** Christy Tidwell,Carter Soles,2021-05-10 Ecohorror represents human fears about the natural world killer plants and animals catastrophic weather events and disquieting encounters with the nonhuman Its portrayals of animals the environment and even scientists build on popular conceptions of zoology ecology and the scientific process As such ecohorror is a genre uniquely situated to address life art and the dangers of scientific knowledge in

the Anthropocene Featuring new readings of the genre Fear and Nature brings ecohorror texts and theories into conversation with other critical discourses The chapters cover a variety of media forms from literature and short fiction to manga poetry television and film The chronological range is equally varied beginning in the nineteenth century with the work of Edgar Allan Poe and finishing in the twenty first with Stephen King and Guillermo del Toro This range highlights the significance of ecohorror as a mode In their analyses the contributors make explicit connections across chapters question the limits of the genre and address the ways in which our fears about nature intersect with those we hold about the racial animal and bodily other A foundational text this volume will appeal to specialists in horror studies Gothic studies the environmental humanities and ecocriticism In addition to the editors the contributors include Kristen Angierski Bridgitte Barclay Marisol Cortez Chelsea Davis Joseph K Heumann Dawn Keetley Ashley Kniss Robin L Murray Brittany R Roberts Sharon Sharp and Keri Stevenson

Nature of Science in Science Instruction William McComas, 2020-08-24 This book offers a comprehensive introduction to Nature of Science NOS one of the most important aspects of science teaching and learning and includes tested strategies for teaching aspects of the NOS in a variety of instructional settings In line with the recommendations in the field to include NOS in all plans for science instruction the book provides an accessible resource of background information on NOS rationales for teaching these targeted NOS aspects and most importantly how to teach about the nature of science in specific instructional contexts The first section examines the why and what of NOS its nature and what research says about how to teach NOS in science settings The second section focuses on extending knowledge about NOS to question of scientific method theory laden observation the role of experiments and observations and distinctions between science engineering and technology The dominant theme of the remainder of the book is a focus on teaching aspects of NOS applicable to a wide variety of instructional environments

Last of the Giants Jeff Campbell, 2019-08-01 Today an ancient world is vanishing right before our eyes the age of giant animals Over 40 000 years ago the earth was ruled by megafauna mammoths mastodons saber toothed tigers and giant sloths Of course those creatures no longer exist and there is only one likely reason for that the evolution and arrival of the earth s only tool wielding hunter the wildly adaptive comparatively pint sized human species Many more of the world s biggest and baddest creatures including the black rhino the dodo giant tortoises and the great auk have vanished since our world became truly global Last of the Giants chronicles those giant animals and apex predators pushed to extinction in the modern era The book also highlights those giant species that remain even though many barely survive living in such low numbers that they are on the brink of leaving this world within the next few decades However there is hope for many endangered species can still be saved As it profiles each extinct and endangered animal Last of the Giants focuses on the conservation efforts that are trying to preserve the world s remaining charismatic species before they are lost forever

Reviving Extinct Species Carol Hand, 2018-07-15 Who wouldn t be thrilled to see a real live dinosaur like those in Michael Crichton s Jurassic Park Readers find out if it is possible to bring

extinct animals back to life This book delves into the science behind attempts to revive extinct species through processes such as cloning and genetic engineering and compares actual with fictional efforts It looks at how scientists have gone about trying to revive extinct species such as the quagga woolly mammoth and passenger pigeon It also considers the ethics and the ecological effects of trying to revive an extinct species and introduce it to a modern day ecosystem *Saving Animals, Saving Ourselves* Jeff Sebo, 2022 In 2020 COVID 19 the Australia bushfires and other global threats served as vivid reminders that human and nonhuman fates are increasingly linked Human use of nonhuman animals contributes to pandemics climate change and other global threats which in turn contribute to biodiversity loss ecosystem collapse and nonhuman suffering Both an urgent call to action and a survey of what ethical and effective action will require this book will be invaluable for scholars advocates policy makers and anyone interested in what kind of world we should attempt to build and how A Most Improbable Story Steven J.
