Sporer, Roy S. Malpass, Guenter Koehnken, 2014-06-03 Why do police officers investigators prosecutors judges and others with an interest in eliciting accurate memory based testimony need to inform themselves of the research literature in experimental psychology that addresses the question of witness memory The answer is straightforward from the perspective of a simple cost benefit analysis As with so many matters in the administration of public funds effectiveness holds important rewards Those who investigate crimes and decide which line of investigation to pursue and which line to postpone or set aside necessarily make judgments about the likely guilt of suspects based on the information at hand If they can make these judgments with a high degree of accuracy everyone benefits For many cases eyewitness identification is an important component of evidence prosecution and plea negotiation If witness identification is correctly implemented investigators and prosecutors can make their judgments effectively and focus their resources more efficiently A major component of effectiveness requires avoiding expending scarce resources on erroneous prosecutions It is in everyone's interest to make the best use of the memory of witnesses to preserve it without changing it to render it maximally accessible to provide an environment in which witnesses feel free to report their recollections and to accurately assess the probable validity of the witness's report regardless of the witness's certainty or doubts about its accuracy This volume gathers evidence from various research domains on eyewitness testimony Although many of the studies discussed deal with eyewitness identification it is noteworthy that many of them also touch upon other areas of concern to eyewitness researchers including chapters on voice recognition by humans and computers with particularly detailed instructions on conducting voice lineup differential aspects of recognition memory in children elderly eyewitness memory problems of cross racial identification psychological aspects of facial image reconstruction techniques person descriptions particular benefits of reinstating context as a means to improve eyewitness memory problems associated with various research paradigms in the eyewitness arena and recommendations on how to conduct lineups and photospreads and their proper evaluation Differentiated from other literature on this topic by its non technical language and accessibility to non professionals this volume covers a great deal of ground raises a host of questions settles some others and points the way to more effective use and evaluation of what eyewitnesses have to say The Handbook of Eyewitness Psychology: Volume I Michael P. Eyewitness Testimony
Elizabeth F. Loftus, 1996 Every year hundreds of defendants are convicted on little more than the say so of a fellow citizen Although psychologists have suspected for decades that an eyewitness can be highly unreliable new evidence leaves no doubt that juries vastly overestimate the credibility of eyewitness accounts It is a problem that the courts have yet to solve or face squarely In Eyewitness Testimony Elizabeth Loftus makes the psychological case against the eyewitness Beginning with the basics of eyewitness fallibility such as poor viewing conditions brief exposure and stress Loftus moves to more subtle factors such as expectations biases and personal stereotypes all of which can intervene to create erroneous reports Loftus also shows that eyewitness memory is chronically inaccurate in surprising ways An ingenious series of experiments reveals that memory can be radically altered by the way an eyewitness is questioned after the fact New memories can be implanted and old ones unconsciously altered under interrogation These results have important implications for court reform police interrogation methods defense strategy and many other aspects of criminal and civil procedure Eyewitness Testimony is a powerful book that should be required reading for trial lawyers social psychologists and anyone who considers the chilling prospect of confronting an eyewitness accusation in a court of law

Eyewitness Memory Charles P. Thompson, Douglas J. Herrmann, J. Don Read, Darryl Bruce, David G. Payne, 2014-03-05 The organization of the first Society for Applied Research in Memory and Cognition SARMAC conference centered around two specifically identifiable research topics autobiographical memory and eyewitness memory These two areas long time staples on the menu of investigators of memory in more natural settings differ on a variety of dimensions perhaps most notably on their specific goals for scientific inquiry and application For many questions about memory and cognition that are of interest to scientific psychology there have been historical as well as rather arbitrary reasons for their assignment to the autobiographical or eyewitness memory fields Perhaps as a result of differing historical orientations the first volume's seven autobiographical memory chapters focus upon the qualities or types of recall from research participants whereas the seven chapters in the eyewitness memory volume generally focus upon the quantity a concern for completeness and accuracy of recall This interest in the ultimate end product and its application within the legal process in general encourages eyewitness memory investigators to modify their testing procedures continually in an attempt to gain even more information from participants about an event Indeed several of the eyewitness memory chapters reflect such attempts Beyond the specific contributions of each chapter to the literature on autobiographical and eyewitness memory the editors hope that the reader will come away with some general observations the autobiographical and eyewitness memory fields are thriving these two fields are likely to remain center stage in the further investigation of memory in natural contexts although the autobiographical and eyewitness memory chapters have been segregated in these two volumes the separation is often more arbitrary than real and connections between the two areas abound the two research traditions are entirely mindful of fundamental laboratory methods research and theory sometimes drawing their research inspirations from that quarter and the two fields though driven largely by everyday
