and humans have an x ray ability Specifically we re able to see through the cluttered leaves of the forest environment in which we evolved This feature helps primates see their targets in a crowded encroached environment To see how this works hold a finger in front of your eyes You ll find that you re able to look through it at what is beyond your finger One of the most amazing feats of two forward facing eyes Our views aren t blocked by our noses beaks etc Why Do We See Illusions We evolved to see moving objects not where they are but where they are going to be Without this ability we couldn t catch a ball because the brain s ability to process visual information isn t fast enough to allow us to put our hands in the right place to intersect for a rapidly approaching baseball If our brains simply created a perception of the way the world was at the time light hit the eye then by the time that perception was elicited which takes about a tenth of a second for the brain to do time would have marched on and the perception would be of the recent past Changizi explains Simply put illusions occur when our brain is tricked into thinking that a stationary two dimensional picture has an element that is moving Our brains project the moving element into the future and as a result we don t see what s on the page but what our brain thinks will be the case a fraction of a second into the future Why Does Reading Come So Naturally to Us We can read faster than we can hear which is odd considering that reading is relatively recent In the Blink of an Eye Wendy Corsi Staub,2009 In this classic New York Times bestselling author Staub delivers a spine tingling tale set in a town populated by spiritualists and riddled with murder
