Writers and draw varied perspectives of it **Being Alongside** Alf Coles, 2013-06-13 How do you establish a classroom culture in which students routinely conjecture and think mathematically How do you establish a way of working with teachers using video in which discussion supports professional development The present book offers answers to these questions through an in depth enactivist study of one exceptional teacher in one innovative mathematics department in the UK The book reveals some striking parallels between working to support students mathematical thinking and working to support teacher learning A case is made for the importance of metacommunication in both contexts communication about the communications that are occurring For example there is compelling evidence from a classroom that metacommunication linked to the words conjecture and becoming a mathematician supports student metacognition and mathematical thinking In working with teachers or students offering these powerful metacommunications seems to require a heightened listening With a heightened listening attention is placed not just in what is said but in what kind of a thing is said with the teacher or facilitator being alongside the individuals in the wider group Read this book if you re a teacher for insights into how one teacher establishes a classroom culture where her children are doing mathematics being mathematicians and reflect on what you want in your own classroom Read this book if you re a teacher educator to reflect on parallels between teaching and running professional development sessions particularly using video If you do not fit in either of these categories read this book and use stories in your life Laurinda Brown University of Bristol **Handbook of Research on Autopoiesis and Self-Sustaining Processes for Organizational Success** Pa?kowska, Ma?gorzata, 2021-01-29 Autopoietic systems show a remarkable property in the way they interact with their environment on the one hand building blocks and energy including information are exchanged with the environment which characterizes them as open systems on the other hand any functional mechanisms the way the system processes incorporates building blocks and responds to information are totally self determined and cannot be controlled by interventions from the environment Information systems in an organization seem to accept the autopoietic system way of development and can help managers to understand the operations of their organizations better The Handbook of Research on Autopoiesis and Self Sustaining Processes for Organizational Success is an innovative reference book that presents the meaning of autopoietic organizations for social and information science examines how autopoietic organizations are information self producing and self controlled and provides a framework for its development in modern organizations The book focuses on analyzing autopoiesis features such as self managing self sustaining self producing self regulating etc Moreover as the aforementioned characteristics receive a new interpretation in IT environments the book also includes an exploration of IT solutions that enable the development of these characteristics This book is ideal for professionals academicians researchers and students working in the field of information economics and management in various disciplines such as information and communication sciences administrative sciences and management education computer science and information technology The Animal Who Writes Marilyn M.

Cooper,2019-02-15 Writing begins with unconscious feelings of something that insistently demands to be responded to acted upon or elaborated into a new entity Writers make things that matter treaties new species software and letters to the editor as they interact with other humans of all kinds As they write they also continually remake themselves In *The Animal Who Writes* Cooper considers writing as a social practice and as an embodied behavior that is particularly important to human animals The author argues that writing is an act of composing enmeshed in nature cultures and is homologous with technology as a mode of making

MIND and LOVE: The Human Experience Lloyd Fell,2011-01-04 The new scientific paradigm of embodied mind or situated cognition is percolating into popular mind science but its fundamentals autopoiesis and structural coupling have never been thoroughly explained Combines the paradigm shift in biology initiated by Maturana and Varela with the recent rush of ideas in social neuroscience to create what hopes to be a refreshingly new explanation of the way our mind works in our everyday experience and reveals the most common blind spots in what we thought we knew about our mind These blind spots are spoiling our individual lives and harming our prospects for peaceful coexistence and care of our environment e g the mistaken ideas that meaning is transferable that decisions come from conscious awareness or that knowledge is a commodity The biological significance of love and the value of embracing uncertainty and respecting the unknown point to a very hopeful vision for our future This is a scientific explanation of mind leavened with process philosophy also invoking spirituality without any religious connotation

Australian Critical Decisions Ann Genovese,2018-02-02 The 1980s was a time of significant social political and cultural change In Australia law was pivotal to these changes The two High Court cases that this book explores

Koowarta v Bjelke Petersen in 1982 and the Tasmanian Dams case in 1983 are famous legally as they marked a decisive reckoning by the Court with both international law and federal constitutionalism. Yet these cases also offer a significant marker of Australia in the 1980s: a shift to a different form of political engagement nationally and internationally on complex questions about race and the environment. This book brings these cases together for the first time. It does so to explore not only the legal legacy and relationship between Koowarta and Tasmanian Dams but also to reflect on how Australians experience their law in time and place and why those experiences might require more than the usual legal records. The authors include significant figures in Australian public life, some of whom were key participants in the cases, as well as established and respected scholars in law, history, Indigenous and environmental studies. The book offers a combination of personal recollections of the cases, the drama of how they were brought before the courts and decided, as well as a consideration of the cases' ongoing significance in Australian life. This book was previously published as two special issues in the Griffith Law Review.

Growing Wings on the Way Rosalind Armson, 2011-05-31 This book is about dealing with messes. Sometimes known as wicked problems, messes or messy situations are fairly easy to spot; it's hard to know where to start; we can't define them; everything seems to connect to everything else and depends on something else having been done first; we get in a muddle thinking about them; we often try to ignore some aspects of them; when we finally do something about them, they usually get worse; they're so entangled that our first mistake is usually to try and fix them as we would fix a simple problem.

Words Made Flesh Justine Bakker, David Kline, 2025-06-03 The first sustained treatment of religion and religions in the scholarship of a prominent Caribbean thinker, Sylvia Wynter, is a profoundly transdisciplinary scholar whose works span an impressive array of theory, literature, science, anthropology, philosophy, and religious studies, as well as different forms including essays, plays, a novel, and a 935-page unpublished manuscript entitled *Black Metamorphosis: New Natives in a New World*. Whatever the medium, Wynter frequently engages religion as a relevant category of analysis, from reflections on Christianity, Islam, and Rastafarianism to the category and role of religion as a universal aspect of human social production. Wynter's writings have received enthusiastic attention by scholars in Black studies, Caribbean theory, critical race theory, literature, and philosophy. But until recently, little scholarly writing exists that directly engages the topic of religion in her corpus. *Words Made Flesh* seeks to fill this gap by focusing exclusively on religion, religions, and religiosity in her work. Bringing together scholars that provide a wide variety of theoretical perspectives on religion, political theology, social theory, and science studies, this book offers an in-depth engagement with one of the most innovative and important thinkers of the last forty years and illustrates how Wynter's writing has significant implications for the study of religion and religion's relationship to colonialism, race, humanism, science, and political theology.
