Gaul,2006-04-20 This volume collects revised versions of papers presented at the 29th Annual Conference of the Gesellschaft f r Klassifikation the German Classification Society held at the Otto von Guericke University of Magdeburg Germany in March 2005 In addition to traditional subjects like Classification Clustering and Data Analysis converage extends to a wide range of topics relating to Computer Science Text Mining Web Mining Fuzzy Data Analysis IT Security Adaptivity and Personalization and Visualization <u>Report of the Workshop on Data and Knowledge in Deep-Sea Fisheries in the High Seas</u> Food and Agriculture Organization of the United Nations,2008-01-01 The Workshop was convened to review an initial draft of the International Guidelines as called for by the FAO Committee on Fisheries at its twenty seventh session in 2007 This expert consultation was preceded by the Expert Consultation on Deep sea Fisheries in the High Seas held in Bangkok in November 2006 The consultation adopted a draft of the international guidelines to be forwarded on to a technical consultation for review and adoption **Big Data and Knowledge Sharing in Virtual Organizations** Gyamfi, Albert,Williams, Idongesit,2019-01-25 Knowledge in its pure state is tacit in nature difficult to formalize and communicate but can be converted into codified form and shared through both social interactions and the use of IT based applications and systems Even though there seems to be considerable synergies between the resulting huge data and the convertible knowledge there is still a debate on how the increasing amount of data captured by corporations could improve decision making and foster innovation through effective knowledge sharing practices Big Data and Knowledge Sharing in Virtual Organizations provides innovative insights into the influence of big data analytics and artificial intelligence and the tools methods and techniques for knowledge sharing processes in virtual organizations The content within this publication examines cloud computing machine learning and knowledge sharing It is designed for government officials and organizations policymakers academicians researchers technology developers and students **Transactions on Large-Scale Data- and Knowledge-Centered Systems III** Abdelkader Hameurlain,Josef Küng,Roland Wagner,2011-08-02 The LNCS journal Transactions on Large Scale Data and Knowledge Centered Systems focuses on data management knowledge discovery and knowledge processing which are core and hot topics in computer science Since the 1990s the Internet has become the main driving force behind application development in all domains An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data and knowledge management systems from centralized systems to decentralized systems enabling large scale distributed applications providing high scalability Current decentralized systems still focus on data and knowledge as their main resource Feasibility of these systems relies basically on P2P peer to peer techniques and the support of agent systems with scaling and decentralized control Synergy between Grids P2P systems and agent technologies is the key to data and knowledge centered

systems in large scale environments This the third issue of Transactions on Large Scale Data and Knowledge Centered Systems contains two kinds of papers Firstly a selection of the best papers from the third International Conference on Data Management in Grid and Peer to Peer Systems Globe 2010 and secondly a selection of 6 papers from the 18 papers submitted in response to the call for papers for this issue The topics covered by this special issue include replication the semantic web information retrieval data storage source selection and large scale distributed applications *Transactions on Large-Scale Data- and Knowledge-Centered Systems XVII* Abdelkader Hameurlain,Josef Küng,Roland Wagner,Ladjel Bellatreche,Mukesh Mohania,2015-01-29 The LNCS journal Transactions on Large Scale Data and Knowledge Centered Systems focuses on data management knowledge discovery and knowledge processing which are core and hot topics in computer science Since the 1990s the Internet has become the main driving force behind application development in all domains An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data and knowledge management systems from centralized systems to decentralized systems enabling large scale distributed applications providing high scalability Current decentralized systems still focus on data and knowledge as their main resource Feasibility of these systems relies basically on P2P peer to peer techniques and the support of agent systems with scaling and decentralized control Synergy between grids P2P systems and agent technologies is the key to data and knowledge centered systems in large scale environments This the 17th issue of Transactions on Large Scale Data and Knowledge Centered Systems contains extended and revised versions of five papers selected from the 24 full and 8 short papers presented at the 15th International Conference on Data Warehousing and Knowledge Discovery DaWaK 2013 held in Prague The Czech Republic in August 2013 Of the five papers two cover data warehousing aspects related to query processing optimization in advanced platforms specifically Map Reduce and parallel databases and three cover knowledge discovery specifically the causal network inference problem dimensionality reduction and the quality of pattern mining task

Freitas,2013-11-11 This book addresses the integration of two areas of computer science namely data mining and evolutionary algorithms Both these areas have become increas ingly popular in the last few years and their integration is currently an area of active research In essence data mining consists of extracting valid comprehensible and in teresting knowledge from data Data mining is actually an interdisciplinary field since there are many kinds of methods that can be used to extract knowledge from data Arguably data mining mainly uses methods from machine learning a branch of artificial intelligence and statistics including statistical pattern recog nition Our discussion of data mining and evolutionary algorithms is primarily based on machine learning concepts and principles In particular in this book we emphasize the importance of discovering comprehensible interesting knowledge which the user can potentially use to make intelligent decisions In a nutshell the motivation for applying evolutionary algorithms to data mining is that evolutionary algorithms are robust search methods which perform a global search in the space of candidate solutions rules or another form of knowl edge representation In contrast most rule induction methods perform a local greedy search in the space of candidate rules Intuitively the global search of evolutionary algorithms can discover interesting rules and patterns that would be missed by the greedy search   **Knowledge Management in the Development of Data-Intensive Systems** Ivan Mistrik,Matthias Galster,Bruce R. Maxim,Bedir Tekinerdogan,2021-06-15 Data intensive systems are software applications that process and generate Big Data Data intensive systems support the use of large amounts of data strategically and efficiently to provide intelligence For example examining industrial sensor data or business process data can enhance production guide proactive improvements of development processes or optimize supply chain systems Designing data intensive software systems is difficult because distribution of knowledge across stakeholders creates a symmetry of ignorance because a shared vision of the future requires the development of new knowledge that extends and synthesizes existing knowledge Knowledge Management in the Development of Data Intensive Systems addresses new challenges arising from knowledge management in the development of data intensive software systems These challenges concern requirements architectural design detailed design implementation and maintenance The book covers the current state and future directions of knowledge management in development of data intensive software systems The book features both academic and industrial contributions which discuss the role software engineering can play for addressing challenges that confront developing maintaining and evolving systems data intensive software systems of cloud and mobile services and the scalability requirements they imply The book features software engineering approaches that can efficiently deal with data intensive systems as well as applications and use cases benefiting from data intensive systems Providing a comprehensive reference on the notion of data intensive systems from a technical and non technical perspective the book focuses uniquely on software engineering and knowledge management in
