Hostile destructive kids become hostile destructive adults and create serious problems for society. *Handling Children's Aggression Constructively: Toward Taming Human Destructiveness* shows how to prevent the development of disturbed aggressive behaviors in children, giving caregivers and educators the tools they need to handle problems in the making so they won't become more difficult and costly problems to deal with later on. Unlike the fine books previously published on how to handle children who already suffer from significant aggressive behavior disorders, this book takes a preventive approach. It focuses on how the ways in which young children are raised contribute toward aggressive behaviors and recommends techniques to manage children's aggression constructively that can be applied from birth through adolescence. **Interpersonal Communication** Denise Solomon, Jennifer Theiss, 2013

Adolescence is a dynamic period, one which exemplifies the importance of understanding the relations between the developing individual and his or her changing context. The articles included in this volume represent the current range of scholarship pertaining to adolescents and their families and exemplify the use of such an approach. The articles underscore the continual importance of the family across adolescence.

### **Emotional Intelligence - Understanding, Influencing, and Utilizing Emotions** Éric Laurent, 2024-07-10

Intelligence has long been a focal point and an explanatory framework of performance and behavior for researchers in psychology and cognitive science. However, the concept of intelligence has been explored through various metaphors and models. In 1990, Salovey and Mayer coined the term emotional intelligence (EI) with respect to a set of processes consisting of

identifying and regulating emotions and more generally adapting behavior to this emotional context Three decades later this book compiles seven chapters introducing the most influential models of emotional intelligence stressing the developmental trajectories that are related to EI dynamics as individuals age and delving into cognitive and neural activities associated with EI Additionally the book discusses the application of EI research to the contexts of everyday life choices economic decision making and neuropsychological practice Altogether the various chapters also provide the opportunity to reconsider the intricate nature of what has often been considered separately as cognitive and affective processes

Levitin, 2014-08-18 Two of the most important social skills in humans are the ability to determine the moods of those around us and to use this to guide our behavior To accomplish this we make use of numerous cues Among the most important are vocal cues from both speech and non speech sounds Music is also a reliable method for communicating emotion It is often present in social situations and can serve to unify a group's mood for ceremonial purposes funerals weddings or general social interactions Scientists and philosophers have speculated on the origins of music and language and the possible common bases of emotional expression through music speech and other vocalizations They have found increasing evidence of commonalities among them However the domains in which researchers investigate these topics do not always overlap or share a common language so

communication between disciplines has been limited The aim of this Research Topic is to bring together research across multiple disciplines related to the production and perception of emotional cues in music speech and non verbal vocalizations This includes natural sounds produced by human and non human primates as well as synthesized sounds Research methodology includes survey behavioral and neuroimaging techniques investigating adults as well as developmental populations including those with atypical development Studies using laboratory tasks as well as studies in more naturalistic settings are included

critical to better understand how the HIV disclosure process happens or does not happen within HIV affected families as well as the best practices on how to disclose In this eBook we present a combination of empirical research studies and critical literature reviews that investigate the reasons for and for not disclosing HIV status within HIV affected families and provide evidence based practices that could be adopted by healthcare professionals to help HIV positive parents facilitate disclosure activities within these families This information can also be used by researchers practitioners and stakeholders who are in a position to influence policies on effective HIV disclosure practices guidelines and programs *Cumulated Index Medicus*,1996
