sophistication improved technology and a better understanding of its philosophy have given the system a new and perhaps permanent place in the armamentarium of the orthopaedic surgeon. All methods of treatment have critics as well as supporters and not infrequently the strongest criticisms are the result of poor understanding of the philosophy proposed and its proper implementation. Professor WEBER in his carefully detailed and well illustrated book has made it abundantly clear that the use of external fixators in the treatment of fractures must be clearly understood by the orthopaedic surgeon in order to obtain satisfactory clinical results. His discussion of its philosophy, pathomechanics and technology are most comprehensive and leave no stone unturned and because of this the book represents a most comprehensive text on the subject.
