Extinction Of The Dinosaur:

The Extinction of the Dinosaurs Don Nardo, 2002 Discusses the extinction of these ancient creatures and the scientific research used

The Evolution and Extinction of the Dinosaurs David E. Fastovsky, David B. Weishampel, 2005-02-07 This 2005 edition of *The Evolution and Extinction of the Dinosaurs* is a unique comprehensive treatment of this fascinating group of organisms. It is a detailed survey of dinosaur origins, their diversity, and their eventual extinction. The book can easily be used as a teaching textbook for a class, but it is also written as a series of readable, entertaining essays covering important and timely topics appealing to non-specialists and all dinosaur enthusiasts: birds as living dinosaurs, the new feathered dinosaurs from China, warm-bloodedness. Along the way, the reader learns about dinosaur functional morphology, physiology, and systematics using cladistic methodology, in short, how professional paleontologists and dinosaur experts go about their work and why they find it so rewarding. The book is spectacularly illustrated by John Sibbick, a world-famous illustrator of dinosaurs, commissioned exclusively for this book.

The Last Days of the Dinosaurs Riley Black, 2024-03

Extinction and Radiation J. David Archibald, 2011-03-15 This study identifies the fall of dinosaurs as the factor that allowed mammals to evolve into the dominant tetrapod form. It refutes the single-cause impact theory for dinosaur extinction and demonstrates that multiple factors—massive volcanic eruptions, loss of shallow seas, and extraterrestrial impact—likely led to their demise. While their avian relatives ultimately survived and thrived, terrestrial dinosaurs did not. Taking their place as the dominant land and sea tetrapods were mammals, whose radiation was explosive following non-avian dinosaur extinction. The author argues that because of dinosaurs, Mesozoic mammals changed relatively slowly for 145 million years compared to the prodigious Cenozoic radiation that followed. Finally, out from under the shadow of the giant reptiles, Cenozoic mammals evolved into the forms we recognize today in a mere ten million years after dinosaur extinction.

The Great Dinosaur Extinction Controversy Charles Officer, Jake Page, 1996-06-30 In 1980, Nobel Laureate Luis Alvarez announced his theory of the dinosaurs' final demise: a gigantic meteorite crashed into the earth and raised a cloud of dust that caused darkness for years, suppressing photosynthesis, which impeded plant growth and eventually starved the dinosaurs. This idea exploded into common awareness with almost unprecedented speed and was instantly embraced by the media and the public. Almost without question, it quickly became the hottest scientific fact. Unfortunately for Alvarez, many in the scientific community did not support this theory, and in fact, later research showed the impossibility of such an idea. *The Great Dinosaur Extinction Controversy* chronicles the fantastic story of how this hypothesis became so widespread the way it became common knowledge from the pages of *Science* to *The New York Times* to *Parade Magazine*, the controversy it caused, and the ample scientific research that proves the theory wrong. Officer and Page also present an attractive and carefully investigated alternative explanation for the mass extinctions that occurred at the end of the Cretaceous period. Through this account, they show the ways that sound science should be performed and the findings transmitted.

The Mistaken Extinction Lowell

Dingus, Timothy Rowe, 1998 Two crackerjack paleontologists take readers on a brisk tour of the leading theories about the dinosaurs disappearance An epic tale of beautiful and terrible beasts and explosions that block out the sun The Mistaken Extinction is a 65 million year old evolutionary murder mystery with a fascination that has yet to die out 300 illustrations
