Extraordinary Story Of Human Origins:

The Extraordinary Story of Human Origins Piero Angela, 1993-06 How can we know about the lives of our ancestors who lived 30 000 or 300 000 or 3 million years ago In *The Extraordinary Story of Human Origins* Piero and Alberto Angela address the many difficulties and challenges that scientists face in assembling the record of human evolution To piece together the intriguing puzzle of human origins it is necessary to study all clues that are made available by multidisciplinary research including paleontology biochemistry geology genetics physics and climatology Like so many Sherlock Holmeses researchers seek all possible clues and analyze them meticulously in hopes of being able to reconstruct the past These pieces are few and fragmentary ranging from the footprints left in volcanic ash 3 7 million years ago by hominids who walked exactly as we do to a Y pattern on molars and mitochondrial DNA But they all provide information on the diet diseases hunting techniques and art of *Australopithecus Homo habilis Homo erectus* the Neanderthal and the first *Homo sapiens sapiens* Written in an accessible but authoritative style this study includes many lively reconstructions of the everyday life of our earliest ancestors based on the most reliable data *The Extraordinary Story of Human Origins* makes available to a wide audience a unique look inside the exciting world of research into the beginnings of human life on earth **Human**

Origins New Scientist, 2018-05-29 Where did we come from Where are we going *Homo sapiens* is the most successful the most widespread and the most influential species ever to walk the Earth In the blink of an evolutionary eye we have spread around the globe taken control of Earth's biological and mineral resources transformed the environment discovered the secrets of the universe and travelled into space Yet just 7 million years ago we were just another species of great ape making a quiet living in the forests of East Africa We do not know exactly what this ancestor was like but it was no more likely than a chimpanzee or gorilla to sail across the ocean write a symphony invent a steam engine or ponder the meaning of existence How did we get from there to here *The Story of Human Origins* recounts the most astonishing evolutionary tale ever told Discover how our ancestors made the first tentative steps towards becoming human how we lost our fur but gained language fire and tools how we strode out of Africa invented farming and cities and ultimately created modern civilization perhaps the only one of its kind in the Universe Meet your long lost ancestors the other humans who once shared the planet with us and learn where the story might end **The Obsessive-Compulsive Disorder** Robert Collie, Harold G Koenig, 2014-01-21 Gain

Hidden Assets Charles Ehin, 2006-07-06 Based on his diverse personal experiences and two decades of interdisciplinary research Dr Ehin unveils the mysteries and shows the practicality of tapping into the ever evolving yet extraordinarily powerful informal networks present in all social groups What this book reveals is the extraordinarily dynamic and tight linkage between three hidden organizational success factors responsible for most work accomplished in both for profit and nonprofit ventures especially in the development of new innovations The book shows why in a knowledge economy it is essential to design organizations that facilitate the fundamental collaborative and creative qualities of human nature rather than unconsciously suppressing them In doing so it is made obvious why most mergers and change efforts fail and the reasons why an average employee only works at two thirds of his her capacity This work clearly demonstrates how smart institutions can harness rather than manage these invisible emergent forces and in the process avoid the dismal record of past organizational transformation initiatives Hidden Assets is a must read not only for top executives knowledge professionals and organizational scholars but for everyone associated with private public or voluntary social institutions

Corbally, 2019-12-09 Religious capacity is a highly elaborate neurocognitive human trait that has a solid evolutionary foundation This book uses a multidisciplinary approach to describe millions of years of biological innovations that eventually give rise to the modern trait and its varied expression in humanity s many religions The authors present a scientific model and a central thesis that the brain organs networks and capacities that allowed humans to survive physically also gave our species the ability to create theologies find sustenance in religious practice and use religion to support the social group Yet the trait of religious capacity remains non obligatory like reading and mathematics The individual can choose not to use it The approach relies on research findings in nine disciplines including the work of countless neuroscientists paleoneurologists archaeologists cognitive scientists and psychologists This is a cutting edge examination of the evolutionary origins of humanity s interaction with the supernatural It will be of keen interest to academics working in Religious Studies Neuroscience Cognitive Science Anthropology Evolutionary Biology and Psychology **Human Affairs** ,2000 The Emergence and Evolution of Religion Jonathan Turner, Alexandra Maryanski, Anders Klostergaard Petersen, Armin W.

Geertz, 2017-08-10 Written by leading theorists and empirical researchers this book presents new ways of addressing the old question Why did religion first emerge and then continue to evolve in all human societies The authors of the book each with a different background across the social sciences and humanities assimilate conceptual leads and empirical findings from anthropology evolutionary biology evolutionary sociology neurology primate behavioral studies explanations of human interaction and group dynamics and a wide range of religious scholarship to construct a deeper and more powerful explanation of the origins and subsequent evolutionary development of religions than can currently be found in what is now vast literature While explaining religion has been a central question in many disciplines for a long time this book draws upon a much wider array of literature to develop a robust and cross disciplinary analysis of religion The book remains true to its subtitle by emphasizing an array of both biological and sociocultural forms of selection dynamics that are fundamental to

explaining religion as a universal institution in human societies In addition to Darwinian selection which can explain the biology and neurology of religion the book outlines a set of four additional types of sociocultural natural selection that can fill out the explanation of why religion first emerged as an institutional system in human societies and why it has continued to evolve over the last 300 000 years of societal evolution These sociocultural forms of natural selection are labeled by the names of the early sociologists who first emphasized them and they can be seen as a necessary supplement to the type of natural selection theorized by Charles Darwin Explanations of religion that remain in the shadow cast by Darwin's great insights will it is argued remain narrow and incomplete when explaining a robust sociocultural phenomenon like religion
